

FIFTEENTH REGISTRATION REPORT.

1856.

FIFTEENTH REPORT

TO THE

LEGISLATURE OF MASSACHUSETTS,

RELATING TO THE

Registry and Return

OF

BIRTHS, MARRIAGES, AND DEATHS,

IN THE

COMMONWEALTH,

FOR THE YEAR ENDING DECEMBER 31, 1856.

BY FRANCIS DEWITT,

SECRETARY OF THE COMMONWEALTH.

B O S T O N :

WILLIAM WHITE, PRINTER TO THE STATE.

Commonwealth of Massachusetts.

SECRETARY'S OFFICE, BOSTON,
December 15, 1857.

To the Honorable Senate and House of Representatives:—

In compliance with the laws of the Commonwealth, I have the honor of submitting to your honorable bodies the Fifteenth Annual Report relating to the Registration and Return of the Births, Marriages and Deaths which have occurred in Massachusetts during the year ending on the thirty-first day of December, 1856.

This document forms the first of the series of Reports and Abstracts printed as Public Documents, in accordance with the Act of the legislature, approved by His Excellency the Governor, on the second day of April, 1857. The Report is from the pen of Dr. NATHANIEL B. SHURTELL, under whose superintendence the abstracts of the four preceding Reports, for the years 1852, 1853, 1854 and 1855, were prepared, and to whom the public are indebted for the summary remarks and practical observations which have accompanied each of the aforesaid documents.

The labor of condensing and combining the returns of the several town clerks and registrars, and of preparing the abstracts and tables which accompany them, for the present Report, has been performed by Dr. Edward Strong and other clerks in this office, who, I am informed by the author of the Report, have accomplished their laborious task with the greatest promptness, and with the usual care and accuracy.

That the Report might be intelligible to all classes of the community, care has been taken to avoid as far as possible the use of technicalities.

In the preparation of the tables, and also in the calculations submitted in the summary remarks, the facts deduced from the last State census, taken in June, 1855, have been used. Under the head of Population, a very complete and lucid condensation of the last census report has been given, adding greatly to the value of the Registration Report as a document for reference and study.

More than usual punctuality has been observed by the town clerks and registrars in making their returns to this office; and it will be noticed that very few towns have neglected to comply with the statutes of the Commonwealth, relating to the important subject of registration. A strong desire seems generally to have existed to make the returns as perfect as possible, and to cause no more delay in their transmission than was absolutely necessary. With this feeling, surely the high character of the Massachusetts Registration Reports will be preserved, and their usefulness extended.

Notwithstanding the great care which is generally observable, there are opportunities in several towns for a

decided improvement in the manner of reporting facts for the preparation of the abstracts. The deficiencies which are of most frequent occurrence, are so strongly pointed out by the writer of the remarks which form the conclusion of the Report, that further mention in this place would be entirely unnecessary, and not productive of any special good.

It will be observed that pains have been taken to preserve in this Report a general uniformity with those that have preceded it; and that although, from time to time, old tables have been extended and new ones formed, nevertheless there have been no changes nor departures from the plans hitherto pursued, whereby the value of the series has been in any degree impaired.

It is believed that the following Report, while it embraces facts extending over a longer space of time than any of its predecessors, will still preserve the interest which has generally attached to other documents on the same subject, proceeding from the same source; and that a benefit will be derived from it commensurate with the labor devoted to its preparation.

Respectfully submitted by,

FRANCIS DEWITT,

Secretary of the Commonwealth.

C O N T E N T S .

ABSTRACTS.	Page
General Abstract of Births, Marriages and Deaths, by Counties and Towns, for the year 1856—showing the number of each sex—the parentage of those born, whether American or Foreign—the nativity of those married—and the aggregate and average age of those who died,	2
TABLE I. Births by Months in 1856—showing the number of each sex in each county during each month, also a recapitulation of parentage,	20
Supplement.—Plurality cases of Births,	22
Supplementary Table.—Illegitimate Births, arranged by counties, months and sex,	24
TABLE II. Stillborn—showing the number in each county, by sexes, during each month of the year 1856,	26
TABLE III. Marriages by Counties and Months, with the nativity recapitulated,	28
TABLE IV. Marriages—conditions of parties, with the specified ages of each, whether first or subsequent,	29
TABLE V. Deaths in 1856, by Months—showing the number of each sex in each county,	32
TABLE VI. Deaths, according to Age—showing the number of the different sexes, with their ages, in each town and county, with population and percentage,	34
TABLE VII. Causes of Death, alphabetically arranged—showing the number of each sex, with ages and diseases, during each month of the year 1856,	84
TABLE VIII. Classified Causes of Death in each County, with the aggregate, for the year 1856,	98
TABLE IX. Classified Causes of Death and percentage of each cause for the five years of registration (1852-6), with their total and average; also, the classification and percentage for the fifteen years and eight months embraced in all the Reports of Massachusetts Registration,	106
TABLE X. Occupations—showing the number of each, with the aggregate and average age at death, in the nine eastern, as well as the five western counties, for the year 1856, and the whole State for twelve years and eight months, from May 1, 1843, to December 31, 1855,	114

ABSTRACTS.

	Page
TABLE XI. An Abstract of Four Years, 1853-6—showing the population of Massachusetts, male and female, according to the State Census of 1855; also the average number of births, marriages and deaths for the years 1853-6, together with the parentage of the born, nativity of the married, and sex and average age of the deceased,	121
TABLE XII. Births—showing the number during the years 1853, 1854, 1855 and 1856 by sexes, months and counties, and the parentage of those born,	140
<i>Supplement.</i> —Births—plurality cases during the four years, 1853, 1854, 1855 and 1856, arranged by months and counties,	142
TABLE XIII. Stillborn—showing the number in each of the several counties during the four years 1853, 1854, 1855 and 1856, by months and sexes,	144
TABLE XIV. Marriages—showing the number throughout the State in the four years, 1853, 1854, 1855 and 1856, by months and counties, with the nativity annexed,	146
TABLE XV. Marriages—exhibiting the conditions and ages of the parties, for the four years, 1853, 1854, 1855 and 1856,	147
TABLE XVI. Deaths—exhibiting the number of persons who have died in each of the several counties during each month of the four years, 1853, 1854, 1855 and 1856,	150
TABLE XVII. Deaths—showing the average number of those who have died in the several counties at different specified ages, arranged by sexes, during the four years ending Dec. 31, 1856,	152

OBSERVATIONS.

<i>Introductory Remarks.</i> —Anticipated value of the Massachusetts Registration	
Reports fully realized,	157
Uniformity of Reports preserved, as of importance,	158
Reports of other States uniform with those of Massachusetts,	158
Important tables introduced in former reports continued in this,	158
No new town incorporated in 1856,	159
Objectionable practice in Massachusetts of changing the boundary of towns,	159
Part of Boxford set off and annexed to Groveland,	159
Groveland set off from Bradford in 1850 and incorporated,	159
Part of Stoncham annexed to South Reading,	160
Part of Braintree annexed to Quincy,	160
New boundary line established between Salem and South Danvers,	160
Boundary line between Cambridge and Somerville changed,	160
Boundary line between Uxbridge and Northbridge changed,	160
Territorial changes of towns in the year 1856 small and unimportant,	160
Change of boundaries to be taken into account,	160
New towns punctual in making returns,	160
Much value of the Reports depending upon the regularity of the returns,	161
Table VI., prepared in last Report for the first time, has fully answered the expectations,	161
The population by sex, given with table VI.,	161
Greater care needed in respect to particulars relating to illegitimate births,	161

OBSERVATIONS.

Page

In the four years' abstracts, the new towns have made independent returns for a portion of the years only,	162
Defective returns from several towns in certain particulars,	162
The work of the clerks faithfully performed,	162
Good evidence of a desire on the part of town clerks to make better returns,	162
The nosology of the last Report approved and therefore continued,	162
Errors in reporting causes of death,	163
A very little attention needed to make the returns much more valuable,	164
<i>Population.</i> —The facts in this Report derived from the State Census of 1855,	165
Area, extent and general boundary of Massachusetts,	165
Comparative size, and rank in regard to population among the States,	165
Division of the State into counties and towns, with the date of incorporation of each county, and the number of acres and towns in each,	166
Review of the population of Massachusetts previous to American Independence,	167
The seven enumerations by the United States,	167
Table showing the population of Massachusetts by counties, according to the seven United States Censuses and the last State Census,	168
Density of population in Massachusetts at different periods,	169
Aggregate population, according to sex, color and nativity,	169
Excess of females over males,	169
Increase of population in five years,	170
Want of uniformity in the increase,	170
Table showing the increase and percentage of increase in the cities,	170
Table showing the towns which have decreased most largely,	171
Table of the towns showing the greatest percentage of increase,	171
Increase and decrease in the several counties during five years,	172
Population by Congressional Districts, according to sex, color and nativity,	173
Particulars relating to the colored population,	173
Sex and age of the population,	174
Centenarians,	175
Nativity of the population,	175
Distribution of the foreign population,	175
Number of families and dwellings in Massachusetts, and percentage of families, persons and dwellings,	177
Less number of houses for a given number of persons in the County of Suffolk and the large cities than in the country towns,	177
<i>Births.</i> —Births during the years 1855 and 1856 compared,	178
Comparative view of births in the Commonwealth reported for six years, 1851-56,	178
Analysis of births in 1856,	178
Table of births for four years, 1853-56, with differences,	179
Remarks on the foregoing Table,	179
Table, showing the whole number of children born during the seven years, 1850-56, arranged according to parentage, by counties, presenting aggregates and percentages,	180
Remarks on the foregoing Table,	185
Births in the County of Suffolk,	186

OBSERVATIONS.

	Page
Relative proportion of sexes born,	186
More boys than girls born,	187
Excess of males over females during eight years,	188
Remarks on the births in Boston,	189
Nativity of the parents of children born in Boston,	189
Nativity of children born in Boston,	191
Births in the principal cities and towns, arranged according to nativity,	192
Excess of births over deaths,	193
Table, exhibiting the excess, by counties, during five years,	194
Table, showing the excess in the principal cities and towns,	195
Remissness in making returns of births to recording officers,	196
Statistics of children born in State Almshouses,	196
Sex of children born,	196
Births in 1856, arranged according to sex and months, with remarks,	197
Plurality cases of births,	197
Nativity of parents of children born in plurality cases,	198
General remarks on plurality cases,	198
Remarks on illegitimates,	199
Remarks on Stillborn,	199
Stillborn children, more particulars concerning, needed,	199
<i>Marriages.</i> —Abstract of marriages analyzed,	200
Towns in which none were solemnized in 1856,	200
Other towns where the number was small,	201
Effect produced by remissness in making proper returns,	202
Delinquency on the part of those who officiate, reprehensible,	202
General interpretation of the marriage laws,	202
Proportion of American and Foreign marriages in the principal towns,	203
Analysis of marriages in Boston,	205
Analysis of marriages throughout the Commonwealth,	207
Usual time for contracting marriage in Massachusetts,	209
Relative ages of youngest and oldest marriages,	209
General remarks on marriages in 1856,	209
General remarks on marriages in Boston in 1856,	211
<i>Deaths.</i> —General analysis of the whole number of the year,	214
Proportion between the sexes,	214
Aggregate and average age at time of death,	215
Average duration of life in the Commonwealth,	216
The largest number of deaths occur among children,	216
Table, illustrating the foregoing remark,	218
Months when there is the greatest number of deaths,	219
Table, showing the nativity of the persons who died in the year 1856,	220
Deaths during three years, 1854-56, compared,	221
Deaths in State Almshouses,	223
Centenarians who have died during the four last years,	223
Facts relating to deaths in Boston,	223
<i>Causes of Deaths.</i> —Synopsis of those reported during the year 1856,	229
General remarks on the Tables of the Abstract,	229

OBSERVATIONS.

Page

New classification introduced into this Report, conformable to those in	
Europe,	229
Zymotic causes most fatal,	232
Smallpox, chicken-pox, varioloid, measles,	232
Special Tables relating to measles,	233
Scarlatina,	235
Special Tables relating to deaths by scarlet fever,	236
Quinsy, eroup,	238
Special Tables, exhibiting deaths by eroup,	239
Whooping cough,	241
Typhus Fever, bilious fever, ship fever, &c.,	241
Special Tables, showing the mortality by typhus fever,	242
Erysipelas,	244
Special Table of deaths by erysipelas,	245
Metria, puerperal fever,	247
Carbuncle, influenza,	247
Dysentery,	247
Special Tables, analyzing dysentery,	248
Diarrhœa and cholera,	250
Cholera infantum,	250
Special Tables, showing the deaths by cholera infantum,	251
Intermittent and remittent fevers,	253
Rheumatism and other Zymotics,	253
Constitutional causes of death,	253
Scrofula,	253
Special Tables of deaths by scrofula,	254
Phthisis, consumption,	256
Special Tables concerning consumption,	257
Local diseases,	259
Pneumonia, lung fever,	259
Special Tables, constructed with reference to pneumonia,	260
Diseases of the digestive organs,	262
Developmental diseases,	262
Special Tables, exhibiting deaths by teething,	263
Childbirth and old age,	265
Violent deaths or discases,	265
Deaths by suicide,	265
Special Tables of deaths by suicide,	266
Deaths by suicide in Boston,	268
No execution during the year 1856,	270
<i>Occupations of such as have deceased during the year 1856,</i>	<i>271</i>

APPENDIX.

Classification of Diseases, as used in this Report,	275
Statistical nosology,	282
Laws of the Commonwealth relating to the registration of Births, Mar- riages and Deaths,	284
Provisions of the Revised Statutes,	284
Act of March 16, 1844,	285
Act of May 2, 1849,	287

* There were four cases of Triplets during the year 1856—one in Norfolk County, comprising two males and a female; two in Suffolk County, one of three males, the other of three females; and one in Worcester County, of three males. Also, among the *stillborn* in Suffolk, occurred a case of three females at a birth.

FOUR YEARS' ABSTRACT.

Table XI. embraces an average of the Births, Marriages and Deaths which have occurred in the several towns of the Commonwealth, for the years 1853-4-5-6. Every town has made a return either for one or the other of these years.

The towns of Agawam, North Andover and South Danvers, which were incorporated in the year 1855, have made independent returns for two years only.

The total population, only, of each town, according to the State census of 1855, is given in this Table. For a more detailed enumeration, Table VI. may be consulted.

TABLE XI.—FOUR

Showing the Population of Massachusetts in 1855; the average together with the Parentage and Nativity of the Births and

RESULTS AND OBSERVATIONS.

OF the series of annual documents which relate to the Registry and Return of the Births, Marriages and Deaths that have occurred within the Commonwealth of Massachusetts, the present Report is the fifteenth; and, like those of preceding years, has been prepared in accordance with the laws of the State, and is issued under the sanction of the Secretary of the Commonwealth.

In the fifteen Reports the accumulated results of fifteen years and eight months, commencing on the 1st day of May, 1841, and terminating on the 31st day of December, 1856, have been given; and it will be noticed, that since the publication of the first Report in February, 1843, there has been a considerable increase in the number of tables which comprise the abstracts, and that many of these have been prepared with additional minuteness in respect to their most important particulars. This, it is hoped, has given corresponding value to the document, and made it more desirable for the use of statistical students.

The importance of the carefully prepared abstracts of the Massachusetts Reports, in furnishing reliable data for calculations necessary in the formation of the abstruse tables essential to correct computations for determining the laws by which the existence of the human species is governed, especially on the American continent, is fully appreciated by those who perform those complex and laborious tasks; and much satisfaction accrues to those who have been the instruments of promoting such desirable results.

The warmest anticipations of those by whose instrumentality the Registration Laws of the Commonwealth were established, have been more than realized; and the department of vital and mortuary statistics has derived incalculable assistance from the carefully digested and prepared abstracts which have resulted

therefrom, and which have been widely disseminated for the general benefit of scientific observers and persons interested in statistical inquiries.

These Reports, besides exhibiting a general view of the results of Registration, afford the most ample means that can be obtained in America, for ascertaining the laws by which the general expectation of life may be closely estimated, and also furnish the required amount of information necessary in legislation for regulating matters relating to the public health and for advancing the moral condition of the people and the sanatory state of the various towns of the Commonwealth. For these purposes much is gained by the additional experience of each new year, as presented in each succeeding Report.

The same uniformity which has been so strikingly characteristic of the Massachusetts Registration Reports, has been preserved with much care in the present document, as will be perceived by a comparison with those which have previously emanated from the department of State with the official sanction of the various gentlemen under whose superintendence they have been issued annually. This uniformity has been deemed of the utmost importance, and has been adhered to as providing more extensive aggregates, covering larger spaces of time, and furnishing comparisons of greater reliability. In other States where similar registration laws exist, the reports bear also a striking resemblance to those of Massachusetts. In a few respects judicious changes have been made, from time to time, in form, and sometimes in the extent of the tables; but in no instance has the general plan been so far changed as to produce any confusion,—the difference being rather an augmentation of particulars with a greater degree of details rather than an absolute change; and in no case has any thing of importance been omitted that was characteristic of a former report, nor has the value of a previously issued document been impaired by the means. In the same respect the value of our Registration Reports has been enhanced by the care taken that the general facts of the reports of other States can be easily blended with our own for more extensive observations.

The tables which were enlarged in the last Report having been found productive of advantageous results, have been continued in the same form in the present document, although the preparation

has been made with great labor and a large extra consumption of time. By this means useful facts have been brought more directly to the notice of statisticians without in any degree injuring the general unity of design so desirable in statistical documents. Special pains have been taken to exhibit in the abstracts such particulars as relate to the nativity of the population, not only in relation to the deaths, but also in connection with the marriages and births. The value of these additional particulars is self-evident, and requires no special notice in this place. Allusions to these will be noticed in the proper places in the subsequent pages of this Report as they come under consideration.

During the year 1856, in which the births, marriages, and deaths occurred which form the basis of this Report, no new town received from the legislature an Act of incorporation, and no town within the Commonwealth changed its form of government by taking that of a city. The boundaries of several towns, however, were curtailed or enlarged by legislative enactment, by the setting off of portions of the territory of some for the enlargement of others. This practice, which so strongly prevails in Massachusetts, is productive of serious evils in regard to registration, causing more or less confusion and uncertainty in the results. The changes during the year in question have happily been so limited in extent that very little effect has been produced in the general results of registration, and there will be no special necessity for taking notice of them in using the abstracts accompanying these remarks. According to the custom which has been deemed necessary in this Report, and for the convenience of future reference, a brief synopsis of such changes as were made by the legislature of 1856 is introduced in this connection. It must be borne in mind by those who make use of the tables, that a portion of births, marriages, and deaths which have taken place in the parts of towns so transferred have been recorded partly in the towns from which the territory has been set off, and partly in those to which it has been annexed.

By an Act of the general court, which was approved by the governor on the 21st day of March, 1856, a small portion of the most northerly portion of the town of Boxford, in the county of Essex, was set off and annexed to the town of Groveland, in the same county. The town of Groveland to which this portion of Boxford has been annexed was set off from the town of Bradford,

and incorporated for town purposes, by an Act which received the executive sanction on the 8th day of March, 1850.

On the 5th day of April of the same year about one hundred and ninety acres of land, situated at the north-east part of the town of Stoneham, in the county of Middlesex, was annexed to the town of South Reading, in the same county.

The north-eastern corner of the town of Braintree, in the county of Norfolk, bounded partly by the channels of Fore River and Hayward's Creek, was set off and annexed to the town of Quincy, in the same county, by an Act of the legislature passed on the 24th of April, 1856.

The governor approved, on the 30th day of April, 1856, an Act establishing a new boundary line between the city of Salem and the town of South Danvers, both in the county of Essex. By this Act a portion of each town was set off and annexed to the other, the change being made at the north-west corner of the city of Salem.

On the day last mentioned, the boundary line between the city of Cambridge and the town of Somerville, in Middlesex county, was altered by an Act of the legislature, and portions of each were annexed to the other.

The boundary line between the towns of Uxbridge and Northbridge, in the county of Worcester, was also changed by the same authority on the same day.

The changes made during the year, it will be perceived, are small compared with those which have been made in former years, and are not of sufficient significance to be productive of much error in instituting comparisons between the results obtained by the registration of the year in question, and others which have preceded it.

It is very important that those who use the tables, especially those which cover the whole time of registration in the Commonwealth, should bear in mind that all facts anterior to changes which relate to new towns and parts of towns that have been annexed to other towns, must be looked for in connection with their parent towns, else considerable errors will be committed.

It will be noticed by an examination of the preceding Abstract that the new towns have, with commendable punctuality, made their returns to the Secretary of the Commonwealth, thereby preventing an irregularity which would very much depreciate the

value of the registration tables. In this particular the Massachusetts Abstracts have been remarkably successful, and upon it much value exists.

In the Report of the year which precedes the one for which this is written, the table which exhibited the number of deaths that occurred in the several towns and counties throughout the Commonwealth, arranged according to sex, was very largely increased over that of former reports, by giving the facts, generally shown for counties only, in a more minute manner so as to include every town in the State. The periods were also subdivided so as to be easily reduced to those adopted in the European tables, at the same time that they can be compared with other American tables. This table, produced with much labor, has fully answered the purposes for which it was intended, and has been considered of much value; and on this account it has been continued in the abstracts which precede these remarks. Should this table be prepared for future reports, so as to take in a wider range of facts, it will serve as the basis for forming calculations relating to the expectation of life in this country, which formerly, for want of well digested material, had to be based almost entirely upon the tables of foreign countries. In connection with this table, the population of every town in the Commonwealth, according to sex, is given, as taken in June, 1855, by authority of the legislature.

Unusual care has been taken that the table of births of illegitimate children should be as nearly correct as possible. This table was introduced for the first time in the Report of 1854, and supplied a chasm in American statistics which had long been regretted by those engaged in philanthropic and reformatory movements. With a little more care on the part of the proper collecting officers, the tables could be made more accurate, and therefore, more reliable for statistical deductions. Great care is necessary that the proper discrimination should be made, between those births of this character which occur in public institutions and those which are from private sources. In connection with these births much interest would accrue, if the ages, nativity, and social conditions of the parents were likewise given.

The plan of former reports has been carried out in the preparation of abstracts containing the results of several years blended together. In the present Report the facts collected for the years 1853, '54, '55 and '56, have been used to form Tables XI., XII.,

XIII., XIV., XV., XVI. and XVII. The first of these embraces an average of the births, marriages and deaths which have occurred in the several towns of the Commonwealth during the four years, and every town has furnished returns for one or more of these years. The towns of Agawam, North Andover and South Danvers, incorporated in 1855, have made independent returns only for 1855 and '56. With a little care on the part of those who use the tables of former reports, the facts therein contained can be used in connection with those furnished in the four years' abstract.

It will be noticed, by a cursory examination of the abstract exhibited on pages 2 to 19, that nearly every town in the Commonwealth has made returns to the Secretary. In a few instances only, has it been necessary to record that no return has been made. The town of Cheshire, in Berkshire County, with a population in 1855 of 1,532, has made no return of births and deaths, and in the town of New Ashford, in the same county, there was no return of marriages. In the town of Sterling, in Worcester County, containing 1,838 inhabitants at the time of taking the State census, there is a deficiency in returns, none being made of births. It is explicitly stated that there were no marriages in the town of Nahant. Towns which have formerly been negligent in their returns have been prompt in communicating facts for the tables of the present Report, so that there is not a town within the Commonwealth that has not furnished something towards perfecting the series of tables.

The usual care devoted to the preparation of the abstracts, has been given by the clerks whose duty it is to perform the tedious labor of producing the complicated and extensive tables which precede these remarks; and when it is considered that the returns are oftentimes carelessly made and unintelligibly written, too much praise cannot be bestowed upon those upon whom this task falls, and who have so well and creditably performed their work.

The appearance of the returns made during the past year, show conclusively that the recording officers have endeavored to perform their duty with scrupulous exactness. Nevertheless, in some instances, a little more particularity would have been better, and would have saved many doubts in the labor of classification, especially in the formation of the tables of the causes of death.

In the last Report a new classification of diseases was introduced, conforming with the nosological arrangement used in

European reports. This has been productive of much good, and has met with the approval of medical statisticians. The same plan has been adopted in the present Report, and much care has been taken that the tables should be properly prepared, so as to accord with it. A little more care in the designation of diseases, in the primary returns, would aid considerably in this part of the work. The neglect of some registering officers has made it necessary to call their attention to the importance of greater exactness in the registration of facts, and of the naming of the different diseases which have been the causes of death. For pointing out some of the most common deficiencies and errors in registration, the following remarks are reiterated from preceding reports. In many respects, not only in the present, but also in preceding reports, there has been a want of satisfaction in the primary returns made to the Secretary of the Commonwealth, by the proper collecting and recording officers. Whatever may have been the cause of the delinquencies, it is very desirable that it should not occur hereafter, and that due care should be taken in perfecting the returns before they are submitted for use to the Secretary. More particular attention should be given to the causes of disease and death; and every officer should be well satisfied that his record is as correct as can be, before he dismisses the subject from his mind. Among the common errors in the returns, is the indiscriminateness which is observable in regard to the use of the most common expressions and terms for distinguishing diseases. For instance, the term consumption is applied with insufficient care, as the cause of death, whenever there is a general wasting away and decay, especially in the case of the death of children and young persons. Often the terms dysentery, disease of the bowels, diarrhœa, teething, cholera, canker and inflammation of the bowels, are used without any discrimination, as the causes of death among young children, and oftentimes they are used as synonymous expressions. It is desirable that more particularity should be given when persons are reported to have died of fever, dropsy, inflammation, cancer, ulcer, bleeding, tumor, &c. Let no recorder be satisfied with a return that he does not sufficiently understand, but always insist upon having an intelligible record. In no instance should he be satisfied with the expressions, disease of the head, disease of the brain, and more especially disease of the bowels, all of which are exceedingly indefinite, although they

are of very frequent occurrence. With very little trouble on the part of the collecting officers, the returns might be made much more perfect, and many of the most glaring defects of registration entirely avoided, so that there would be a greater reliability given to the tables, and the object for which the returns are made be more thoroughly accomplished. There has been, fortunately, exhibited in the returns of many of the officers, a growing desire to have this well done, and it is believed that in a short time the American reports will show that the facts connected with the registry and return of mortuary and vital statistics, have been collected with the necessary care.

In the pages which follow, the general plan which has been adopted in the former Registration Reports by the present writer, will be pursued, and the various subjects which are to be treated of will follow, for the sake of uniformity, in the usual order.

POPULATION.

A few general facts, relating to the population of the Commonwealth, being necessary in using the tables and general abstracts contained in this document, a few pages of this Report are devoted to a brief review of this subject before entering particularly upon a consideration of the objects which more particularly belong to this Report. The facts which form the basis of these remarks are derived from the last State census, taken by order of the legislature, in 1855, having special reference to the condition of the population as existing on the first day of June of that year. In the preparation of the abstracts and accompanying tables the figures relating to population have also been deduced from the same source.

According to the most reliable authorities, Massachusetts has an area of about 7,800 square miles, or not far from 4,990,000 acres, comprising about $\frac{1}{330}$ th part of the whole Union. Including the islands situated on its southernmost bounds, and which form the counties of Dukes and Nantucket, it lies between $41^{\circ} 15'$ and $42^{\circ} 53'$ north latitude, and between $69^{\circ} 56'$ and $73^{\circ} 32'$ west longitude from Greenwich Observatory, or $3^{\circ} 30'$ and $7^{\circ} 8'$ east longitude when reckoned from the meridian of Washington, having a breadth from north to south varying from 47 to 110 miles, and an extreme length from east to west of about 190 miles. If the measurement of the State is taken in the latitude of Boston, the capital city, it will be found to be 130 miles from east to west, and on the meridian of the same city about 90 miles. In point of size it ranks the twenty-eighth State in the Union, three only, Rhode Island, Connecticut and Delaware, being of smaller territorial extent. According to the census taken by the general government in 1850, Massachusetts stood the sixth in point of population, following next to New York, Pennsylvania, Ohio, Virginia and Tennessee, and in density it ranked the first, containing about 127.49 inhabitants to a square mile of territory when the States taken together had an average of only 15.54 to

the square mile. Its increase, during the ten years previous to the year 1850, was such as to place it in that respect the twelfth.

The Commonwealth is divided into fourteen counties, and these are subdivided into three hundred and thirty-two cities and towns. The following table, prepared for the census report, gives, in a convenient form, the names of the counties arranged in alphabetical order, with the date of their formation and the number of cities and towns in each:—

N A M E .	When Incorporated.	Extent in Acres, by Val. of 1850.	Number of Towns.
Barstable,	June 2, 1685,	207,623	13
Berkshire,	April 24, 1761,	572,309	31
Bristol,	June 21, 1685,	328,859	19
Dukes,	November 1, 1683,	61,451	3
Essex,	May 10, 1613,	283,344	34
Franklin,	June 24, 1811,	410,699	26
Hampden,	February 20, 1812,	344,053	21
Hampshire,	May 7, 1662,	329,102	23
Middlesex,	May 10, 1643,	493,822	51
Nantucket,	June 20, 1695,	15,371	1
Norfolk,	March 26, 1793,	259,584	23
Plymouth,	June 2, 1685,	364,452	24
Suffolk,	May 10, 1643,	6,688	4
Worcester,	April 2, 1731,	930,831	58
Totals,	4,608,188	332

Explicit reliance must not be placed in the extent of the several counties as given in acres, in the table, as in various valuations taken according to law at different times, the acres vary much in number without any change of territorial limits. The date of incorporation given above to Dukes County, is the exact time that the islands of which it is composed were incorporated by the State

of New York, of which they were a part at the time. These islands were annexed to the Province of Massachusetts by the charter which passed the seals on the 7th of October, 1691. Until the 20th of June, 1695, the counties of Dukes and Nantucket were united under the name first given.

A brief review of the statistics of population of the Commonwealth exhibits the following interesting facts. While Massachusetts existed as a Colony and Province under the government of Great Britain, it exceeded in population each of the American Colonies, and continued so to do as late as the period of the Revolutionary War.

As early as the year 1701 it is supposed to have contained about 70,000 persons of both sexes; in 1749, about 220,000; and in 1775, about 352,000. If these figures are reliable, it will be perceived that the increase of forty-eight years, from 1701 to 1749, was at the rate of 214.29 per cent. for the whole time, and of 4.46 per cent. per annum. For the twenty-six years, from 1749 to 1775, the increase was 60 per cent., or 2.31 per cent. per annum; and for the seventy-four years, from 1701 to 1775, 402.86 per cent., or 5.44 per cent. per annum. At this last date, Pennsylvania came next, with a population of 341,000; and Virginia with that of 300,000, Connecticut with 262,000, New York with 238,000, North Carolina with 181,000, and Maryland with 174,000. In 1775, Massachusetts and Pennsylvania were estimated to have been each a third larger than New York, which last was considerably smaller than Connecticut, and was not even half as large as its present enterprising emporium.

Seven enumerations of the people of Massachusetts have been taken by the authority of the general government, since the adoption of the Federal Constitution. The first, second, third and fourth,—those previous to the year 1830,—were taken on the first day of August, of 1790, 1800, 1810 and 1820; the last three, namely, the fifth, sixth and seventh, were taken on the first day of June, of the years 1830, 1840 and 1850. Several times the census of the State has been taken by authority of the legislature, the most complete enumeration having been made in the year 1855, as to facts existing on the first day of June of that year. The following table will exhibit the population of the several counties of the Commonwealth, as given by the seven United States censuses and by the last State census:—

Population of Massachusetts, by Counties, according to the Seven United States Censuses, and the last State Census:—

COUNTIES.	UNITED STATES CENSUSES.							STATE CENSUS.
	1790.	1800.	1810.	1820.	1830.	1840.	1850.	
Barnstable,	17,354	19,293	22,211	24,026	28,511	32,548	35,276	35,412
Berkshire,	30,291	33,885	35,907	35,720	37,835	41,745	49,591	52,791
Bristol,	31,709	33,890	37,168	40,908	49,592	60,164	76,192	87,425
Dukes,	3,265	3,109	3,290	3,292	3,517	3,958	4,540	4,401
Essex,	57,913	61,205	71,888	74,655	82,859	94,987	131,300	151,018
Franklin,	—	—	—	29,268	29,501	28,812	30,879	31,652
Hampden,	—	—	—	28,021	31,639	37,366	51,283	54,819
Hampshire,	59,681	72,432	76,275	26,187	30,254	30,897	35,732	35,485
Middlesex,	42,737	46,928	52,780	61,472	77,961	106,611	161,383	191,023
Nantucket,	4,550	5,617	6,807	7,266	7,202	9,012	8,452	8,064
Norfolk,	—	27,216	31,245	36,471	41,972	53,140	78,892	94,367
Plymouth,	29,535	30,473	35,169	38,136	43,014	47,373	55,697	61,495
Suffolk,	44,875	28,015	34,381	43,940	62,163	95,773	114,517	171,811
Worcester,	56,807	61,192	61,910	73,625	81,355	95,313	130,789	149,516
Totals,	378,717	423,245	472,041	523,287	610,408	737,699	994,514	1,132,369

In referring to the preceding table it must be borne in mind, however, that until the 26th of March, 1793, the county of Suffolk included the present county of Norfolk, and also until the 18th of June, 1803, the towns of Hingham and Hull, now in the county of Plymouth. Franklin County was set off from that of Hampshire on the 24th of June, 1811, and Hampden from the same on the 25th of February, 1812.

The density of population in Massachusetts at the different periods of taking the United States censuses has been as follows: In 1790, 48.55; in 1800, 54.25; in 1810, 60.51; in 1820, 67.09; in 1830, 78.25; in 1840, 94.58; and in 1850, 127.50. For the six periods of ten years intervening the taking of each of the censuses, the percentage of increase has been 11.76, 11.53, 10.86, 16.65, 20.85, and 34.81.

On the first day of June, 1855, the aggregate population of the Commonwealth, according to the State census, was 1,132,369. Of these persons, 550,034 were reported as males, and 582,335 as females. Of the same number, 1,122,463 were whites—545,417 males and 577,046 females; and 9,906 were colored persons—4,627 males and 5,279 females, including 6,923 designated as blacks, 2,844 as mulattoes, and 139 as Indians. Of the 545,417 male whites—428,946 individuals were natives of the United States, 116,114 were born on foreign soil, and of 347 the nativity was not ascertained. Of the 577,046 white females, 448,334 were natives, 128,571 foreigners, and 151 of unknown nativity. Those classed as colored were chiefly of native birth, 9,295 having been born in the United States, and only 578 in foreign countries. No return was made of the nativity of 33 individuals of this class.

It is generally found, in the various censuses that have been taken, to be the case, that in Massachusetts the number of females largely exceeds that of males. This has been a cause of considerable perplexity, as it is a well ascertained fact that more males are annually born in the Commonwealth than females, and it is equally true that more females than males die during the same period of time. The facts derived from the last State census, by comparison with those exhibited in the United States census of 1850, show that, during the five years that elapsed previous to the taking of the last census, the number of males increased 61,517, and that of females 76,338; while, during the same space of time, as shown by registration, the births of males

amounted to 77,575 in number, and of females 72,840, excluding the stillborn from the count; and when the deaths also, as recorded, were 47,749 of males to 48,728 of females. It has been customary to account for this fact of the predominance of the female sex to the fact, that the immigration of females exceeds that of males, while the converse is true with regard to the sex of emigrants from the Commonwealth.

During the five years preceding the first day of June, 1855, the increase of the population of Massachusetts was 137,855, which is to be attributed in part to the natural cause of excess of births over deaths, and partly to the incidental cause of excess of immigration over emigration. To the first of these causes an increase of 54,929 in the population only can be attributed, as the number of births during the period was 151,135, while that of deaths was 97,206, leaving a balance of 82,926 to be accounted for by the second cause.

The increase of population throughout the Commonwealth, for the five years, was not in all cases uniform. In eighty-six towns there was an actual decrease of inhabitants, in comparison with the former State census taken in 1850. The following table shows the relative increase in all the cities and one town:—

CORPORATE NAME.	1850.	1855.	Increase.	Percentage of increase.
Boston.	136,881	160,490	23,609	15.64
Lowell.	33,383	37,554	4,171	15.13
Worcester,	17,049	22,286	5,237	39.59
Charlestown,	17,216	21,700	4,484	36.20
Salem,	20,264	20,934	670	10.48
Cambridge,	15,215	20,473	5,258	38.10
New Bedford,	16,443	20,389	3,946	24.01
Roxbury,	18,364	18,419	55	.84
Lawrence,	8,282	16,114	7,832	92.80
Lynn,	14,257	15,713	1,456	15.43
Springfield,	11,766	13,788	2,022	21.69
Taunton,	10,441	13,750	3,309	35.53
Newburyport,	9,572	13,357	3,785	40.10
Fall River,	11,524	12,680	1,156	13.52
Chelsea,	6,701	10,151	3,450	65.03

In using this table, however, it must be observed, that from the cities of Roxbury and Lynn whole towns have been taken, while large amounts of territory have been annexed to the cities of Boston, Lowell, Lawrence and Newburyport.

The towns which show the greatest decrease in population, according to the last two State censuses, are given in the sub-joined table; and it must be remarked, that in most instances of large decrease the cause is chiefly owing to the setting off of part of their territory for the increase of other towns:—

	Per cent. Decrease.		Per cent. Decrease.
Newbury,	66.70	Cummington,	16.82
Danvers,	49.68	Rutland,	16.13
Dracut,	43.01	Blandford,	16.11
West Springfield,	29.58	Holland,	16.06
Andover,	28.72	Middleborough,	15.60
Rochester,	20.50	Chester,	15.19
Plainfield,	19.80	Royalston,	13.94
Wendell,	17.73	Lynnfield,	12.57
Reading,	17.15	Otis,	12.47

The following list, comprising thirty-five towns, shows all that exhibit an increase of more than 30 per cent. In some instances this increase can be fairly attributed to increased territory:—

	Per cent. Increase.		Per cent. Increase.
Lawrence,	92.80	Cambridge,	38.10
Somerville,	86.69	Watertown,	38.04
Milford,	69.82	Haverhill,	37.85
Melrose,	66.05	Lee,	36.63
Chelsea,	65.03	Winchester,	36.44
Tewksbury,	64.05	Charlestown,	36.20
Brookline,	58.82	Monson,	35.83
Huntington,	54.82	Taunton,	35.53
Buckland,	53.86	Waltham,	34.93
Marlborough,	48.27	Newton,	34.90
Gardner,	47.80	West Boylston,	33.99
Hopkinton,	47.73	Shirley,	33.36
Westborough,	47.67	Lexington,	32.76
Natick,	44.63	North Bridgewater,	31.51
Woburn,	43.82	Abington,	31.18
Malden,	42.30	Attleborough,	31.13
Newburyport,	40.10	Clinton,	30.89
Worcester,	39.59		

In respect to the counties there has been an increase of population in each, with the exception of Dukes and Nantucket, as will be seen on examining the accompanying table:—

COUNTIES.	POPULATION.		Per cent. Increase in five years.
	1850.	1855.	
Barnstable,	33,997	35,442	04.25
Berkshire,	48,876	52,791	08.01
Bristol,	74,979	87,425	16.60
Dukes County,	4,416	4,401	—00.34
Essex,	127,170	151,018	18.75
Franklin,	30,888	31,652	02.47
Hampden,	50,224	54,819	09.21
Hampshire,	31,290	35,485	03.48
Middlesex,	155,762	194,023	24.56
Nantucket,	8,779	8,064	—08.14
Norfolk,	77,441	94,367	21.86
Plymouth,	54,509	61,495	12.82
Suffolk,	145,758	171,841	17.89
Worcester,	126,565	149,516	18.13
Totals,	973,654	1,132,369	16.30

The following table will show the aggregate population of the Commonwealth, according to sex and nativity, arranged by Congressional Districts, as existing on the first day of June, 1855, when the last State census was taken:—

Districts.	POPULATION.					NATIVITY.		
	Males.	Females.	Total.	White.	Colored.	American.	Foreign.	Unknown.
I.	46,554	47,616	94,170	91,789	2,381	86,911	7,172	87
II.	51,135	53,401	104,536	103,872	664	87,058	17,415	63
III.	53,529	55,383	108,912	108,562	350	83,053	25,830	29
IV.	50,184	55,626	105,810	105,550	260	63,126	42,595	89
V.	52,569	56,141	108,710	106,398	2,312	70,724	37,924	62
VI.	48,192	52,615	100,807	100,208	599	86,021	14,721	65
VII.	57,770	60,005	117,775	117,530	245	90,817	26,937	21
VIII.	47,002	52,984	99,986	99,668	318	76,503	23,468	15

The State census of 1855 shows the following particulars in connection with the colored population, which consisted of 9,906 individuals, comprising about .87 per cent. or $\frac{1}{114}$ th part of the whole number of inhabitants of the Commonwealth. The residence of the largest part—about two-thirds—was in the counties of Suffolk, Bristol and Berkshire. In sixteen towns only, were there more than one hundred in each. There were 2,160—or 961 males and 1,199 females—in Boston; out of these, 219 were in institutions. In New Bedford there were 1,657—730 males and 927 females; 99 of whom were in institutions. In Springfield there were 399; in Salem, 297; in Cambridge, 292; in Pittsfield, 276; in Nantucket, 242; and in Worcester, 202. There were none in seventy-three towns. Included with the colored were 139 Indians, 71 of whom were males and 68 females. These were found in fourteen towns. A very large portion of the pres-

ent Indian population being of mixed blood,—the negro in most instances being predominant,—this class of population was enumerated with the colored by those who collected facts for the census. In the year 1848, it was supposed that there were only six Indians of pure blood in Massachusetts.

In regard to sex, the population of the Commonwealth was so divided in 1855, that of 1,132,369 individuals who comprised its population, 550,034 were males, and 582,335 were females, the females being in excess over the males 32,301; or in other words, there were to every hundred males nearly one hundred and six females. The greatest proportion of females to males was in the counties of Middlesex, Hampden and Suffolk, and the least in the counties of Dukes, Nantucket and Franklin, where a greater number of males were found.

In some of the cities the predominance of the females was very large in 1855. In Lowell there were 153 females to 100 males; in Newburyport, 123 females to 100 males; and in Salem, 120 females to 100 males. This large excess was undoubtedly owing to the great number of females employed in the various factories in those cities.

The relative ages of the individuals who formed the population of the Commonwealth in 1855, are shown in the following table in a very clear manner:—

AGES.	Whole No.	Percentage.	AGES.	Whole No.	Percentage.
Under 5, . .	132,941	11.74	60 to 70, . .	42,423	3.75
5 to 10, . .	115,862	10.23	70 to 80, . .	20,810	1.84
10 to 15, . .	110,098	9.72	80 to 90, . .	6,138	.54
15 to 20, . . .	117,047	10.34	90 to 100, . .	634	.06
20 to 30, . .	235,678	20.81	100 and over, .	19	—
30 to 40, . .	165,046	14.58	Unknown, . .	2,341	.21
40 to 50, . .	111,500	9.84			
50 to 60, . .	71,829	6.34	Totals, . .	1,132,369	100.00

The greatest number of persons living in one period of ten years will be found in that of the first period, being under ten years of age, numbering 248,806 individuals, or nearly 22 per cent. of the whole population of the State; of these, the largest portion were under five years of age. Of the 1,132,369 individuals comprising the population of the Commonwealth, 358,904 were under 15 years of age; 701,100 were between the ages of 15 and 60; 70,005 were between 60 and 100; and 19 were over 100 years of age. The ages of 2,341 were not ascertained.

The nineteen persons who had attained 100 years of age, were distributed through the State as follows:—One of them was found in Falmouth, in the county of Barnstable; one in Lawrence, and one in Newburyport, in the county of Essex; one in Sunderland, in the county of Franklin; one in Northampton, in Hampshire County; one each in Billerica, Carlisle, Charlestown, North Reading and Waltham, and two in Lowell, in the county of Middlesex; one in Walpole, in the county of Norfolk; one in Duxbury, in the county of Plymouth; two in ward seven in the city of Boston, and one in Chelsea, in the county of Suffolk; and one each in Petersham and Spencer, in the county of Worcester.

As regards nativity alone, 886,575 of the inhabitants of the Commonwealth in 1855, were of native birth, and 245,263 were born in foreign countries. Of the native born, 433,237 were males and 453,338 were females; and of those of foreign birth, 116,431 were males and 128,832 were females. The American born comprised 78.16 per cent. of the white population of the State in 1855, and the foreigners 21.79 per cent., the remaining .05 per cent. being of those whose nativity was unascertained. A much larger proportion of the colored were natives, being 93.83 per cent. of that class.

In the several counties of the Commonwealth the foreign population was thus distributed: There were to every one hundred Americans 4.99 in Barnstable, 21.63 in Berkshire, 21.92 in Bristol, 2.95 in Dukes, 21.61 in Essex, 7.22 in Franklin, 27.71 in Hampden, 15.41 in Hampshire, 32.47 in Middlesex, 5.99 in Nantucket, 33.25 in Norfolk, 11.71 in Plymouth, 61.61 in Suffolk, and 24.39 in Worcester, making, in an aggregate, 27.66 throughout the Commonwealth. The population as found in 1850, by the United States census, and in 1855 by the State census, classi-

fied by nativities, with the amount of increase or decrease in five years, will be found in the following table:—

	1850.	1855.	Increase.	Decrease.

Total population,	994,514	1,132,369	141,213	3,358

In this table the children of foreign parents, if born in this country, are classed with natives.

The inhabitants of Massachusetts in 1855, consisted of 228,845 families, and were thus classed in reference to their dwellings :—

228,845 families,
175,311 dwellings,
15.48 dwellings to 100 persons,
22.09 families to 100 persons, and
130.06 families to 100 dwellings.

It will be perceived that there were about five persons in each family, and a dwelling for between six and seven individuals.

In the different counties the number of families and dwellings are generally very nearly in the same proportion as the population. In the county of Suffolk, however, there is a variation from this, there being about ten houses to one hundred persons and about nineteen families to one hundred persons, the general average throughout the Commonwealth being considerably larger, as above stated. In the counties of Barnstable and Franklin, there are nearly twice as many houses for the same number of persons as in the county of Suffolk. As would naturally be expected, in the large cities the number of houses to the population is much smaller than throughout the State, but the proportion does not differ much from that which exists in the principal cities of Europe, as shown in foreign tables of statistics.

BIRTHS.

The whole number of births that have occurred within the State during the year ending on the 31st day of December, 1856, and which have been registered in the different towns and cities, and returned to the office of the Secretary of the Commonwealth, according to law, shows an aggregate of 34,445, being an increase of 1,600 over the number reported for the previous twelve months. A majority of the children born, according to the tables contained in the foregoing abstract, was as usual males, amounting to 17,650, or 51.24 per cent. of the whole number of births; 16,577, or 48.12 per cent. were females: and the balance, 218, or .64 per cent., were children whose sex was not ascertained for registration. Compared with the results of registration for the past five years, the following annual increase will be obtained: excess of births in 1856 over those in 1855, 1,600; in 1855 over 1854, 848; in 1854 over 1853, 1,077; in 1853 over 1852, 1,118; in 1852 over 1851, 1,121.

According to the returns it appears, that 15,908, or 46.18 per cent. of all the children born within the Commonwealth in the year 1856, were the offspring of American parents; 14,570 children, or 42.30 of the whole were of foreign parentage entirely; 908, or 2.64 per cent., were the children of American fathers and foreign mothers, and 1,035, or 3.00 per cent. were of foreign fathers and American mothers. The parentage of 2,024, or 5.88 per cent. of the children born, was not ascertained for record. It will therefore be noticed, that 1,943, or 5.64 per cent. of the births are of children of whom only one parent was of American nativity; and that 16,513, or 47.94 per cent. were of children of whom one or both parents were of foreign birth. It was shown, by the returns used in the construction of the tables of the Report preceding this, that less than half of the children born within the Commonwealth in 1855, were the issue of American parents, a fact noticeable for the first time that year. The same remark is equally true with reference to the year 1856, with the additional

fact, that fewer children of purely American parentage were born in Massachusetts than those who had one or both parents of foreign birth.

The comparative number of births of those that have been registered and returned during the four years, 1853, '54, '55 and '56, are shown in the following table, as far as respects the nativity of the parents. It is strikingly perceptible, on an inspection of the figures, that the ratio of increase is still in favor of the offspring of foreigners. The relative proportion of the sexes of those born during the same periods, and the annual difference between each two consecutive years, are also given :—

	1853.	1854.	1853 & 1854. Difference.	1855.	1854 & 1855. Difference.	1856.	1855 & 1856. Difference.
Whole number,	30,920	31,997	+1,077	32,845	+ 848	34,445	+1,600
Males,	15,798	16,352	+ 554	16,785	+ 433	17,650	+ 865
Females,	14,965	15,469	+ 504	15,888	+ 419	16,577	+ 689
Of unknown sex,	157	176	+ 19	172	— 4	218	+ 46
Of American parents,	16,049	16,470	+ 330	15,947	— 523	15,908	— 39
Of foreign parents,	11,753	12,476	+ 723	13,708	+1,232	14,570	+ 862
Of American father and foreign mother,	683	687	+ 4	786	+ 99	908	+ 122
Of American mother and foreign father,	811	703	— 108	831	+ 128	1,035	+ 204
Of unknown parentage,	1,633	1,661	+ 28	1,573	— 88	2,624	+ 451

By an examination of the above figures, the singular fact is apparent, that while the aggregate number of births throughout the Commonwealth has been on the increase, there has been a gradual diminution in the number of births of children of American parents, and that there has been an increase in this particular, in respect to the children of foreign parents. This diminution in number, on the part of American children born, and also increase on the part of those of whom one or both parents were of foreign birth, has been to such an extent, that the births of children of strictly American parentage has become less in number than of those that have one or both parents of foreign birth.

The facts given above, in a general view, for the whole Commonwealth, are exhibited below as far as they concern the nativity of the parents of the children born.

The tables in which the foregoing facts are exhibited, cover a period of several years, and contain the results of each year's registration with the addition of interesting calculations. The whole number of children born in the several counties, both of American and foreign parents, are given for the seven years, 1850-56, together with the aggregate and percentage in each county for the whole series of years, and also the percentage in each county compared with the aggregate throughout the whole Commonwealth, and the American and foreign population according to the United States census of 1850, and also the State census of 1855, together with other desirable calculations. The greatest degree of reliance can be placed in the facts and calculations presented. The parentage of children has been arranged according to the nativity of the father alone, so that many births are set down as of American parentage when the mother was of foreign birth.

It is very distinctly shown in the foregoing tables, that the relative proportion of births of children within the Commonwealth, has resulted, as in former years, slightly in favor of American fathers, though in a less degree than in any preceding year. A large diminution from the figures, 1,211, which show the plurality of the births of children of strictly American fathers over those of foreign parentage, (the mothers not being taken into account in the deduction,) would appear, were those of the children who have mixed parentage to be classed with those of strictly foreign. Instead of a balance of 1,211 births, or 3.5 per cent. in favor, there would be a balance the other way of 605. The abstracts of the years 1853, '54, '55 and '56, furnish the following figures:—

	1853.	1854.	1855.	1856.
Total number of Births, . . .	30,920	31,997	32,845	34,445
Of American Parentage, . . .	16,040	16,470	15,947	15,908
One or both Parents Foreign, .	13,247	13,866	15,325	16,513
Of unknown Parentage, . . .	1,633	1,661	1,573	2,024
Excess of American,	2,793	2,604	622	—
Excess of Foreign,	—	—	—	605

Owing to some cause, there were in the year 1856, more births of children whose parentage could not be ascertained, than during many of the years just preceding. This is much to be regretted, as the returns in this particular had so much improved from year to year, as to give very reasonable hopes of almost perfect registration in regard to the nativity of the parents of the children born within the Commonwealth.

Classing as of American parentage all having American fathers, and as of foreign parentage all having foreign fathers, it will be noticed, that during the seven years of registration commencing on the first day of January, 1850, and ending on the last day of December, 1856, there were, in the whole Commonwealth, 117,608 children born of American fathers, comprising 54.36 of the whole number of births, and 84,921 of foreign fathers, 39.25 per cent. Besides these, there were 13,825, or 6.39 per cent. of the whole number, whose parentage could not be ascertained for registry, making in all an aggregate of 216,354 births for seven years.

During the seven years, 1850-56, the greatest number of births occurred in the county of Suffolk, containing the capital city of the Commonwealth, amounting to 41,085: and of these, 13,182 only were registered as of the children of American fathers, while the more considerable amount 26,924, somewhat more than twice that number, were of foreign fathers. Only 979 were classed as of unascertained parentage. Thus it appears, that during seven years of registration last past, more than 67 per cent. of all the births within this county, of known parentage, were of the offspring of foreign fathers, and that they were about 13 per cent. of all the births within the State during that period of time, according to the returns received at the office of the Secretary of the Commonwealth. A comparison with other calculations of a similar character made for preceding years, will show that this percentage has been increasing at a considerable rate.

It has been usual, in the Massachusetts Reports on Registration, to devote a small space to the consideration of the relative proportion between the sexes born within the State, on account of the general interest which is had in this subject, by those engaged in statistical pursuits. In this particular the Massachusetts tables invariably exhibit a predominance of the births of males over those of females, in some years amounting to a considerable number, and agreeing, as is correctly remarked by Dr. Josiah Curtis,

the writer of many elaborate works on statistics, and also by Dr. Charles W. Parsons, in his valuable registration reports, presented to the legislature of Rhode Island, with facts existing in other countries. In the following table, which contains facts for the last eight years of registration in Massachusetts, it will be seen that the rule on this point, and which has been so emphatically stated in preceding Reports, still holds true, and this not only to the aggregate number of births during the eight years, but even for each one of them. The percentages for the aggregates are given in the last line of the table :—

YEARS.	Males.	Females.	Unknown.	Totals.
1849,	13,329	12,263	171	25,763
1850,	14,137	13,392	135	27,664
1851,	14,949	13,613	119	28,681
1852,	15,246	14,132	121	29,802
1853,	15,798	14,965	157	30,920
1854,	16,352	15,469	176	31,997
1855,	16,785	15,888	172	32,845
1856,	17,650	16,577	218	34,445
Aggregate for eight years, .	124,286	116,599	1,272	242,117
Percentage for eight years, .	51.31	48.16	.53	100.00

While the above table shows an increase every year, in the number of boys born and also of girls born, it likewise exhibits an excess of 7,687 births of boys over girls, during the eight years, in which there were born 240,885 children of ascertained sex—1,272 children being placed out of the calculation for want of the necessary particulars in this respect. The whole number of boys born during this period, was 124,286, or 51.31 per cent. of all the births in the Commonwealth; that of females being 116,599, or 48.16 per cent.; and of children of unknown sex, 1,272, or .53 per cent. More than one-half of the children born, therefore, were males; and this result would not be changed if the unknown were placed to the account of the females. The addition of the facts resulting from the returns for the year 1856, has not produced any variation in this particular, from the rule

which is so sufficiently well demonstrated as to be considered general for Massachusetts. The percentage of the births of those of unascertained sex has somewhat increased. During the year 1849, the excess of the births of the boys over girls, as returned, was 1,066; in 1850, 745; in 1851, 1,336; in 1852, 814; in 1853, 833; in 1854, 833; in 1855, 897; and in 1856, as deduced from the accompanying abstract, 1,073. In this particular, the rule, as deduced from the Massachusetts tables, is corroborated by the facts gleaned from the tables given in the registration reports of other States; and these do not differ materially from those obtained from the statistical returns of other countries.

The same facts are shown in the several counties throughout the Commonwealth, as exhibited in the following table, prepared for the eight years, 1849-56:—

COUNTIES.	Whole No.	SEX.			Excess of Males in eight years.
		Males.	Females.	Unknown.	
Barnstable,	6,147	3,131	2,976	37	158
Berkshire,	9,824	5,128	4,642	54	486
Bristol,	14,521	8,935	8,453	133	482
Dukes and Nantucket, .	1,668	885	742	41	143
Essex,	31,783	16,374	15,262	147	1,112
Franklin,	6,017	3,065	2,768	181	297
Hampden,	11,138	5,787	5,317	34	470
Hampshire,	7,049	3,670	3,338	41	332
Middlesex,	40,581	20,740	19,601	240	1,139
Norfolk,	21,782	11,188	10,540	54	648
Plymouth,	12,053	6,089	5,891	73	198
Suffolk,	46,228	23,619	22,549	30	1,100
Worcester,	30,326	15,602	14,520	204	1,082
Totals,	242,117	124,246	116,599	1,272	7,647

An examination of the above table shows, that the greatest absolute excess of the births of boys over the births of girls, has

been, relatively, in the counties of Middlesex, Essex, Suffolk and Worcester; and the least in the counties of Dukes and Nantucket, Barnstable, Plymouth and Franklin. In the county of Franklin alone have there been, during the year 1856, more births of girls than of boys,—a fact which was true in the year 1855, only for the counties of Middlesex and Barnstable.

From the report of the City Registrar of Boston, it appears, that during the year 1856, the whole number of births in the capital city of the State was 5,922, of which 3,053 were of males and 2,869 of females—exhibiting an increase of 106 over the number reported the previous year. They are classed as follows, according to the nativity of the parents:—

Birthplaces of Parents.	Fathers.	Mothers.	Birthplaces of Parents.	Fathers.	Mothers.
Boston,	428	491	Ireland,	2,988	3,198
Massachusetts, (out of Boston,)	474	428	France,	36	17
Maine,	280	378	Spain and Portugal, . .	12	4
New Hampshire, . . .	234	175	Germany and North of Europe,	302	238
Vermont,	80	38	British Am. Provinces.	263	309
Connecticut,	21	20	Other For. Countries, .	81	39
Rhode Island,	16	20	At Sea,	1	2
Other American States,	137	109	Unknown,	166	161
England,	233	170			
Scotland,	111	66	Totals,	5,866	5,866

RECAPITULATION.

	Fathers.	Mothers.
New England States,	1,533	1,553
Other American States,	137	109
Foreign Countries,	4,029	4,041
At Sea,	1	2
Unknown,	166	161
Totals,	5,866	5,866

Hence it is evident, that of the 5,866 children born in Boston in 1856, only 1,670 were the offspring of American fathers; and of these, only 902 were of Massachusetts fathers, and but 428 of these last were the children of native Bostonians. Other figures in the Registrar's report show, that in 1,427 instances only both parents were Americans, making about 24.09 per cent. of all the births in the city,—a decrease from the record of the previous year. In 259 cases, comprising 4.37 per cent. of the births, the fathers only were native born; and in 223, or 3.76 per cent., the mothers only were American born. In 2,881 instances, being 48.64 per cent., both parents were Irish.

The number of children born in each of the twelve wards, with their ratio to the population, as stated in the last city census, which does not agree in all respects, with that taken by the State in June, 1855, is thus given by Nicholas A. Apollonio, Esq., the City Registrar:—

Wards.	Population.	Births.	Ratio.
I. . . .	19,264	869 as 1 to	22.16
II. . . .	15,963	755 " 1 "	21.14
III. . . .	13,175	477 " 1 "	27.62
IV. . . .	7,912	124 " 1 "	63.80
V. . . .	10,128	301 " 1 "	34.64
VI. . . .	11,597	295 " 1 "	39.31
VII. . . .	18,430	750 " 1 "	24.57
VIII. . . .	12,690	317 " 1 "	40.03
IX. . . .	9,541	286 " 1 "	33.36
X. . . .	12,553	434 " 1 "	28.92
XI. . . .	13,264	476 " 1 "	27.86
XII. . . .	17,931	838 " 1 "	21.39
	<hr/> 162,748	<hr/> 5,922	

The following facts are gleaned from this carefully prepared report. In 1856, the number of births were as one to every 27.48 of the population of the city. There were 50 births of colored children, an increase of 21 over the number reported the previous year,—being in the ratio of 1 to 44.40 of the colored population. There were 52 twin births, (13 being in ward 1, 7 in ward 2, and 8 in ward 12,) and two cases of triplets, one in ward 9, and the other in ward 11. In 32 instances, the twins were of Irish parents; in seven, of American; in two, of German; in the remaining nine instances, the parents were of various foreign countries. One pair of twins was colored. One set of the triplets

(3 males) belonged to American parents; the other (3 females) to Irish parents.

The particulars in the accompanying table, showing the nativity of the parents of the children born in Boston in 1856, are of considerable interest:—

NATIVITY OF PARENTS.		OFFSPRING.		
Father.	Mother.	Males.	Females.	Total.
United States,	United States,	728	699	1,427
England,	England,	57	29	86

In the following table is exhibited the whole number of births that have occurred within the fourteen cities of the Commonwealth, during the four years, 1853, '54, '55 and '56, arranged according to the nativity of the parents, as registered by the proper officers:—

Corporate Name.	1853.			1854.			1855.			1856.		
	American.	Foreign and Mixed.	Unknown.	American.	Foreign and Mixed.	Unknown.	American.	Foreign and Mixed.	Unknown.	American.	Foreign and Mixed.	Unknown.
Boston, . . .	1517	1066	72	1511	3987	156	1313	4311	162	1119	4285	163

Springfield, .	210	170	35	221	165	36	213	271	18	218	261	17
Worcester, . .	298	311	8	320	421	1	338	438	4	342	518	11

In preparing the foregoing table, the children of mixed parentage were classed with those of foreign, in order to contrast them more strongly with those of entire American blood. The results which are shown are in many cases very striking, such as in the case of the cities of Boston, Cambridge, Fall River, Lawrence, Lowell, Roxbury, Salem and Worcester, where the children of pure American blood born during the year 1856, were very largely in the minority, whereas in the cities of Lynn and New Bedford the converse was equally true.

The same facts in respect to several of the principal towns, are given in the following table:—

TOWNS.	1853.			1854.			1855.			1856.		
	American.	Foreign and Mixed.	Unknown.	American.	Foreign and Mixed.	Unknown.	American.	Foreign and Mixed.	Unknown.	American.	Foreign and Mixed.	Unknown.
Abington, . . .	110	60	6	144	72	6	165	65	2	118	103	8
Blackstone, . . .	57	153	3	56	132	—	46	116	—	48	151	2
Chicopee, . . .	109	91	2	98	175	2	59	119	2	67	76	6
Dorchester, . . .	129	163	12	157	207	7	112	137	—	117	113	—
Milford, . . .	89	178	—	96	189	1	108	181	33	93	250	1
Pittsfield, . . .	110	127	10	115	119	6	113	113	10	94	151	9
Plymouth, . . .	139	30	—	111	40	—	133	51	7	119	58	7
Stoughton, . . .	127	50	2	91	81	1	89	85	—	92	106	1
Taunton, . . .	142	155	5	142	221	—	186	211	1	213	219	2
Weymouth, . . .	151	48	1	158	67	—	165	74	1	110	81	1

In the towns, it appears, there are cases proportionally as strong as in the cities—Blackstone, Dorchester, Milford, Pittsfield and Stoughton presenting a very large preponderance of the births of children of foreign issue, while Abington, Plymouth and Weymouth show a contrary result. Other towns in the Commonwealth undoubtedly would exhibit similar facts in an equally strong degree.

The excess of births over deaths will be found, on an examination of the abstracts, to have been very large within the Commonwealth during the year 1856. With 34,445 births and 20,734 deaths, as registered throughout the various cities and towns, this excess for 1856 is 13,711, an increase of 2,664 over the number shown the preceding year. The following table is constructed for showing the comparison in this particular, for the last five years of registration, according to the several counties of the Commonwealth:—

COUNTIES.	1852.				1853.				1854.				1855.				1856.			
	Births.	Deaths.	Excess of Births.		Births.	Deaths.	Excess of Births.		Births.	Deaths.	Excess of Births.		Births.	Deaths.	Excess of Births.		Births.	Deaths.	Excess of Births.

Fall River, . . .	487	379	108	Attleborough, .	258	124	134
Chelsea, . . .	332	164	168	Woburn, . . .	185	77	108
Gloucester, . . .	358	168	190	Blackstone, . . .	201	106	95
Dorchester, . . .	260	121	139	N. Bridgewater, .	208	103	105
Nantucket, . . .	119	158	—39	Barnstable, . . .	35	25	10
Haverhill, . . .	256	122	134	Fairhaven, . . .	99	52	47
Chicopee, . . .	149	132	17	Framingham, . .	124	40	84
Milford, . . .	347	175	172	Westfield, . . .	104	107	—3
Adams, . . .	202	69	133	Sandwich, . . .	148	101	47

The towns selected for the above list, comprise the forty-four largest in the State, as ascertained by the last census taken in June, 1855. In only two of these is there a greater number of deaths than births, namely in Nantucket and Westfield. The former, a town with 8,064 inhabitants, returns 39 more deaths than births, not much unlike the returns of the year 1855, when this excess was 12. Westfield, having a population of 4,557 in 1855, shows 104 births to 107 deaths, an excess of 3 in favor of the latter. Barnstable, which reported no births in 1855, and only 7 deaths, though having 4,998 inhabitants, now presents 35

births to 25 deaths, giving the births an advantage of 10. In several of the towns the proportion between the births and deaths, as made evident by registration, is truly astonishing. For instance, in the cities of Lawrence, Lynn, Springfield, Newburyport and Chelsea, and the towns of Taunton, Gloucester, Dorchester, Haverhill, Adams, Abington, Newton, Pittsfield, Weymouth, Waltham, Northampton, Dedham, Randolph, Attleborough, Woburn, North Bridgewater and Framingham, the births were more than twice as numerous as the deaths. In some of the above named towns the number was three times as great.

It is to be regretted, that in nearly every Report it has been necessary to state that a blennish in registration existed, owing to the negligence in the registry of births in some of the towns. The town of Cheshire, in Berkshire County, with 1,532 inhabitants, as last year, has made no returns of births or deaths, and only one marriage. Williamstown, in the same county, has done better than last year, and shows 37 births, 14 marriages, and 43 deaths, in a population of 2,529. The town of Sterling, in Worcester County, made no return of births, although it exhibited 11 marriages and 24 deaths, with a population of 1,838.

The births in the State institutions were as follows, viz.: in the State Almshouse in Monson, 25 of the 99 which occurred in the town; in the Almshouse in Tewksbury, 78 of the 111 in that town; and in the Bridgewater Almshouse, 67 of 158 returned.

The fact which has been shown very generally in preceding Reports, namely, that with a greater number of male children born, there was a greater mortality among the females, is also equally true with regard to this particular, as exhibited by the returns for the year 1856. There were, this year, throughout the whole Commonwealth, as has been stated before, 34,445 births of children; and of these, 17,650 were males and 16,577 females. During the same space of time the whole number of deaths amounted to 20,734,—10,201 of males and 10,401 of females. An examination of the tables in the last eight Reports, shows invariably an excess of births of boys over those of girls, the aggregate numbers for these years being 124,286 boys and 116,599 girls. The number of deaths during the same time amounted to 77,418 males and 79,091 females. This shows an excess of male births in eight years amounting to 7,685, and an excess of female deaths amounting to 1,673.

In regard to the months in which the births occurred in 1856, the accompanying table will make a sufficiently clear exhibit for the whole Commonwealth, in aggregate and by sex:—

MONTHS.	Totals.	SEX.		
		Males.	Females.	Unk.
January,	2,554	1,318	1,223	13
February,	2,528	1,303	1,216	9
March,	2,807	1,492	1,301	14
April,	2,550	1,281	1,257	12
May,	2,594	1,344	1,239	11
June,	2,769	1,422	1,331	16
July,	3,004	1,534	1,457	13
August,	3,169	1,659	1,490	20
September,	3,085	1,581	1,484	20
October,	3,136	1,577	1,515	14
November,	3,009	1,532	1,460	17
December,	3,165	1,579	1,556	30
Unknown,	107	45	33	29
Totals,	31,477	17,667	16,592	218

It will be seen, that more births were reported as having taken place in August and December than in the other months, and the least number in February. Indeed, an inspection of the table given above will show, that less than three thousand occurred in each of the first six months, and over three thousand in each of the last six months. Most boys were born in every month of the year. The ratio between the most productive month and the least so was as six to five, and in these there was an excess of boys, severally of 169 and 87.

The whole number of children born in plurality cases in 1856, was 624; and of these, 305 were males, 312 females, and 7 of unknown sex. This is an excess of 32 over the number reported

in 1855. The following table will show the nativity of the parents of the children of this class:—

COUNTIES.	Total.	American.	Foreign.	Am. Father.	For. Father.	Unk.
Barnstable,	12	10	12	—	—	—
Berkshire,	22	6	8	—	2	6
Bristol,	24	10	14	—	—	—
Dukes,	2	—	—	—	—	2
Essex,	68	40	12	2	—	14
Franklin,	18	6	10	—	—	2
Hampden,	34	20	14	—	—	—
Hampshire,	38	14	12	—	—	12
Middlesex,	112	34	52	10	—	16
Nantucket,	4	4	—	—	—	—
Norfolk,	57	19	36	—	—	2
Plymouth,	30	14	10	2	—	4
Suffolk,	128	26	84	4	8	6
Worcester,	75	43	26	—	—	6
Totals,	624	246	290	18	10	70

Births in plurality cases occurred, it appears, in every county of the State, and the greatest number was of children of foreign parents.

During the year 1856, there were four cases of triplets in the Commonwealth, viz.: one in the town of Sharon, in the county of Norfolk, two males and a female; two cases in Boston, in Suffolk County, one of three males and the other of three females; and one in the city of Worcester, of three males. The three females born at one birth in Boston, should more particularly be classed among the stillborn.

Thirteen years of registration show, that 4,165 children were born in plurality cases, of whom 2,131 were males, 2,005 females,

and 29 of unascertained sex. There were recorded in 1852, four cases of triplets; five in 1853; seven in 1854; four in 1855, and four in 1856, as above stated.

In respect to illegitimates, there were 257 children born out of wedlock, according to the returns, 121 of whom were males, 135 females, and 1 of unknown sex. Fifty-six of these were born at the State Almshouse at Tewksbury, and thirty-two in the State Almshouse at Bridgewater. Undoubtedly, in this particular, registration is very defective in Massachusetts, and there is no reasonable hope that it ever will be otherwise.

The number of the stillborn in 1856, throughout the whole State, amounted to 695—384 males, 232 females, and 79 of unascertained sex—a slight diminution from the number reported the last year. About four-tenths of these occurred within the county of Suffolk, where it is believed that greater care is taken than elsewhere in the Commonwealth, to obtain correct returns in this particular. The greatest number of these, 69, occurred in the month of October. Of these, 63 happened in January, 42 in February, 66 in March, 68 in April, 55 in May, 64 in June, 61 in July, 64 in August, 43 in September, 69 in October, 43 in November, and 57 in December. The results of eight years registration, 1849–56, show 4,556 cases of this kind, of which 1,806 were of males, 1,177 of females, and 1,573 of unreported sex. It is one of the great desiderata of registration, that more particularity should be observed in collecting facts relating to the subject of the stillborn.

MARRIAGES.

There have been solemnized in Massachusetts, according to the returns made to the office of the Secretary of the Commonwealth, 12,265 marriages during the year 1856, being 64 less than the number registered the previous year, 1,418 less than in 1854, and 563 less than in 1853, but 687 more than in the year 1852. Of the above 12,265, both parties of 6,818 couples were Americans by birth, and 4,323 parties were of foreign nativity; in 495 marriages the grooms were of American birth and the brides of foreign, and in 487 the grooms were foreigners and the brides American. In 142 marriages the nativities of the parties were not ascertained for record. The last four years, 1853-56, present the following particulars relating to marriages:—

NATIVITY OF PARTIES.	NUMBER OF COUPLES.			
	1853.	1854.	1855.	1856.
Both parties American,	7,381	7,492	6,918	6,818
Both parties Foreigners,	4,057	4,797	4,269	4,323
American Groom and Foreign Bride, .	485	542	467	495
Foreign Groom and American Bride, .	458	512	487	487
Nativity unknown,	447	340	188	142
Total for four years,	12,828	13,683	12,329	12,265

In the town of Hancock, in the county of Berkshire, containing, by the State census of 1855, 848 inhabitants, no marriages were registered during the years 1854 and '55, although a proportional number of births and deaths were reported during the same time for registration. This has been the case before with regard to the same town. In the year 1856, however, three marriages were consummated in this town. In the town of Winthrop, in

Suffolk County, which showed a deficiency of marriages in 1855, there was one only in 1856. Auburn, in Worcester County, the only other town destitute of marriages in 1855, has exhibited, by the returns of 1856, five. Only two towns have been entirely deficient in this respect, during the year for which the facts for this Report were collected, viz.: Mount Washington, in Berkshire County, with a population of 344, and showing 6 births and 7 deaths; and Nahant, in Essex County, with 270 inhabitants, and which made return of 13 births and 2 deaths for the year.

The following eight towns reported only one marriage each as having occurred within their precincts during the year 1856, viz.: Cheshire, in Berkshire, with 1,532 inhabitants, and no births nor deaths, the same as last year; New Ashford, in the same county, with a population of 195; Chilmark, in Dukes County, with 676 inhabitants, and reporting 18 births and 13 deaths; in Franklin County, Erving with 471 inhabitants, Heath with 741, and Monroe with 217, all having had births and deaths within their limits during the time; Halifax, in the county of Plymouth, with a population of 786, and 19 births and 4 deaths during the year; Winthrop, in Suffolk County, above alluded to, with 407 inhabitants, and returning 6 births and 7 deaths during the twelve months.

Five towns report two marriages each for the year, viz.: Alford, in Berkshire County, having 526 inhabitants; Berkley, in Bristol County, with 924 inhabitants; Tolland, in Hampden County, with 603 inhabitants; Boxborough, in Middlesex County, with a population of 413; and Hull, in Plymouth County, with 292 inhabitants. In each of the above towns there were births and deaths during the year.

In eleven towns there were only three marriages each, viz.: in Florida, Hancock and Washington, in the county of Berkshire; Dighton, in the county of Bristol; Wenham, in the county of Essex; Leyden, in the county of Franklin; Holland, in the county of Hampden; Westhampton, in the county of Hampshire; Tyngsborough, in the county of Middlesex; North Chelsea, in the county of Suffolk; and New Braintree, in the county of Worcester. These towns together show, in an aggregate population of 9,341, 193 births and 115 deaths to 33 marriages, during the year 1856.

The foregoing particulars show, that the remissness which has been alluded to so frequently in former Reports, still exists to a great degree, and it is feared that the defect lies in the negligence of the persons officiating, in their not making the proper returns to the registering officers; a neglect exceedingly culpable when it is considered, that oftentimes the transmission of property may be effected very seriously by this disregard to the rights of others and to the laws of the Commonwealth. The statutes relating to marriage, it would seem, require more stringent enforcement, and if not sufficiently explicit, such explanation as may be needed for their correct and faithful fulfilment.

As at present existing, the laws of the Commonwealth are understood generally as follows: When both parties intending marriage reside in the same town, the intention must be registered in the office of the town clerk, the officer recording the names, ages, birthplaces, and parents' names of each, and whether a first, second, &c. marriage, and also the occupation of the man, and issuing a certificate accordingly. When the parties reside in different towns within the Commonwealth, the registry must be made in each, and certificates obtained; but when one party only resides in the State, the certificate of that party is sufficient. If the man should be under the age of twenty-one years, or the woman under eighteen, the consent of the parent or guardian must be first obtained. Regularly inducted clergymen, in the exercise of their profession within the Commonwealth, have authority to marry in any part of the State, provided that either the clergyman, the bridegroom or the bride shall reside at the place of marriage. Justices of the peace can only officiate in the county for which they are commissioned, and then only when one of the parties to be married is a resident of the same county. No marriage can be performed unless the proper certificate is first produced; and after the marriage is solemnized, the proper certificate of marriage must be returned for record before the tenth day of the following month, to the registering officer in the town or city where the marriage was performed.

In respect to the nativity of the parties who contracted marriages in Massachusetts during the year 1856, as obtained from the abstracts which precede these remarks, and from the table on page 200, it appears, that rather more than one-half of the whole number of persons were of American birth, and that, with the

exception of 982 couples of these, the greatest proportion were of Americans to Americans. An examination of other parts of these remarks will show, that this conclusion does not correspond with the births of children throughout the Commonwealth. The number of this class has been considerably diminishing during the past three years.

The following table will show, on a simple inspection, the proportion of American and foreign marriages in the cities within the State, during the year for which the returns have been made, which have been used in the preparation of the accompanying abstract and tables, compared with the result exhibited in last year's tables,—the strictly American being kept by themselves, and the foreign and mixed combined together:—

Corporate Name.	1855.				1856.			
	Whole No.	American	Foreign.	Unknown.	Whole No.	American.	Foreign.	Unknown.
Boston,	2,855	988	1,855	12	2,528	815	1,671	12

Waltham,	—	—	—	—	29	23	6	—
Watertown,	81	16	65	—	87	8	79	—

The great preponderance of marriages of foreigners will be seen to have been in Boston, Cambridge, Chelsea, Chicopee, Lawrence, Lowell, Milford, Pittsfield, Roxbury, Salem, Watertown and Worcester; and of Americans in Abington, Fall River, Lynn, New Bedford, Northampton, Plymouth and Waltham. The cause of this is very evident, namely, from the fact that in the former towns many causes operate to induce a large residence of those of foreign birth for the various occupations depending entirely upon labor; whereas, in other towns, certain branches of industry are carried on more congenial to persons of native birth. In the agricultural districts, particularly, persons of the latter class comprise almost entirely the persons married.

The following facts relative to the marriages which have occurred during the year in the city of Boston, the capital of the Commonwealth, have been deduced from the very minute and carefully prepared report of the City Registrar, Mr. Appolonio, which was presented to the city council in January last:—

There were but 2,914 Intentions of Marriage entered during the year 1856—147 less than were recorded in 1855. The marriages received and entered to January, 1857, number 2,536, a decrease of 319 from the number recorded at the same time last year. Of the males, 1,033, or 40.73 per cent. of the whole number, were born in the United States, almost precisely the same proportion that existed the previous year; 233 of this number only were born in Boston, and 310 in other portions of Massachusetts. Maine furnishes a greater number of grooms than any other New England State, being 198. New Hampshire next, 104, leaving the three remaining States represented by a total of 80. States further south and west are represented by 108 grooms. The remaining 1,503 males are represented by 960 natives of Ireland, making 37.85 per cent. of the entire number, a slight reduction from the previous year's result, and 64.51 per cent. of the foreigners. Germany and North of Europe contribute 10.14 per cent., British American Provinces 9.87 per cent., and England 7.32 per cent., leaving Portuguese, Italians, Frenchmen, &c., to make up the remainder.

Of the females married, 989 or 38.99 per cent. were born in the United States: of these, Boston contributes 341, the remainder of the State 348, Maine 192, (very nearly the same number as of males,) the remaining four New England States 145, and the States south and west, 63. As with the males, Maine furnishes more females for wedlock than either of the other States. The remaining 1,547 comprise 1,080 Irish females, or 72.14 per cent. of all the foreign females, 185 born in the British American Provinces, 126 in Germany and Northern Europe, 79 in England, 21 in Scotland, 6 in other foreign places, while the birthplaces of 50 were unknown.

The following table shows the birthplaces of the couples married in Boston. The right hand outside column of totals designates the males, while the females are denoted in the bottom line of totals:—

Birthplaces of Males.	BIRTHPLACES OF FEMALES.														
	Boston.	Massachusetts.	Maine.	New Hampshire.	Vermont.	Rhode Island.	Connecticut.	Other States.	Ireland.	England.	Scotland.	Brit. Provinces.	Germany and N. of Europe.	Other Places.	Unknown.

Germany and N. of Europe, . . .	8	2	—	—	—	—	—	—	19	2	2	2	113	—	3
Other Places, . .	7	3	1	—	—	—	2	4	19	3	—	7	8	—	32
Unknown,	—	—	—	—	—	—	—	—	—	—	—	—	—	—	15
Totals of Fem.,	341	248	192	87	32	14	12	63	1080	79	21	185	126	6	50
Totals of Males,	233	310	198	104	51	10	19	108	960	109	35	147	151	86	15

The above table will be readily understood from the following explanation: The outside right hand column shows that 233 grooms were Boston-born. Of these, 99 married Boston-born females, 40 married the same number of females from other parts of the State, 26 married females from Maine. Of the 925 New England males, 750 married New England females, 53 married Irish females, and 55 married females born in the British Provinces. Of the 960 Irish males, 870 married their own country-

women ; 32, females from the Provinces ; and 26 married females born in Boston. A glance at the table will show that the materials which make up a Boston population are of quite a diversified character, the Irish element largely predominating.

The whole number of marriages registered in the various towns of the Commonwealth, and returned for the seven years, 1849-56, when arranged by counties, with their annual average, make the following comparison with those which were solemnized during the year 1856, and which last are exhibited in the right hand column by themselves :—

Counties.	1849.	1850.	1851.	1852.	1853.	1854.	1855.	Average for 7 yrs.	1856.
Barnstable,	271	270	292	308	236	270	266	273	261

Plymouth, . .	367	428	468	507	478	522	453	460	481
Suffolk, . . .	1,218	2,561	2,973	2,787	2,981	3,252	2,977	2,679	2,661
Worcester, . .	837	1,151	1,257	1,196	1,416	1,511	1,488	1,269	1,606
Totals, . . .	6,936	10,315	11,966	11,578	12,828	13,682	12,329	11,380	12,265

Although the number of marriages has fallen off the last two years, nevertheless in each of them there were more marriages than in the annual average for the seven years preceding the one to which the remarks of this Report more particularly belong. Nine

of the fourteen counties exhibit for the year 1856, an excess over the average given in the table, while the remaining five, Barnstable, Dukes, Hampshire, Nantucket and Suffolk, show a small decrease. The counties of Bristol, Franklin, Hampden, Middlesex, Nantucket, Norfolk, Plymouth and Worcester, show an excess of marriages over the number reported for these counties during the year 1855.

Somewhat more than half of the marriages consummated during the year within the Commonwealth, have been solemnized in the counties of Suffolk, Middlesex and Essex, which do not quite contain one-half of the population of the State. Previous to the taking of the last State census, these counties fell considerably short of this proportion, and yet recorded annually more than one-half of the marriages as in the tables under consideration.

The table which follows, contains the marriages which have been recorded during the last thirteen years, arranged according to the several months in which they occurred, with an annual average; and the whole are compared with those which took place during the year 1856, similarly arranged. It will be perceived, that the whole number for thirteen years was 117,945, of which the annual average has been 9,072, which is somewhat less than the number recorded in 1856:—

MONTHS.	1853.	1854.	1855.	1856.	13 Years.	Average.
January, . . .	1,239	1,335	1,131	1,245	10,556	812
February, . . .	812	1,127	1,001	773	7,861	605
March, . . .	749	688	658	772	6,578	506
April, . . .	1,176	1,056	1,079	1,051	9,880	760
May, . . .	1,198	1,214	1,118	1,046	10,691	822
June, . . .	997	1,023	900	960	9,112	701
July, . . .	935	999	896	918	8,078	622
August, . . .	881	938	824	806	7,712	593
September, . .	1,065	1,170	1,038	1,023	10,080	775
October, . . .	1,254	1,373	1,229	1,181	12,005	923
November, . .	1,594	1,832	1,516	1,593	15,577	1,198
December, . .	868	907	893	827	9,140	703
Unknown, . . .	30	21	46	70	675	52
Totals, . . .	12,828	13,683	12,329	12,269	117,945	9,072

During the year 1856, the greatest number of marriages occurred in the month of November, as has usually been the case in Massachusetts. The next most popular months have been in the following order, viz.: October, May, January, September and April. The least popular have been March, August, February, July, June and December. In this respect, the registration of 1856 agrees exactly with that of 1855.

In aggregate, there were 12,265 couple married in 1856 throughout the Commonwealth. The ages of 183 males and 237 females of these were not registered. Most men, by quinquennial periods, as well as women, were married between the ages of 20 and 25; of the former there were 5,096 and of the latter 5,493. In the youngest period, under 20 years of age, there were 206 males and 2,739 females. Between the ages of 25 and 30 there were married 3,641 males and 2,235 females, and above this age there were 3,322 males and 1,798 females.

Respecting first marriages, the most common period during the year, as exhibited by the returns, has been between the ages of 20 and 25 years for both sexes. The next period has been for men between the ages of 25 and 30, and for women that under 20 years. The third period for men has been from 30 to 35, and for women from 25 to 30. The first of the above named periods includes 4,194 first marriages of men and 5,018 of women, when both parties were first married. Of the first marriages in 129 cases, both parties were under 20 years of age.

The whole number of men married for the first time, was 10,207. Of this number, 9,740 were married to maidens, and 467 to widows. The youngest males married were two young men of 16, one to a girl of 18 years and the other to one of 19, also for the first time. The oldest man married for the first time was between 75 and 80 years of age, his bride being a widow of from 50 to 55 years of age.

The number of women married for the first time was 10,962. Of these women, 9,740 married bachelors and 1,222 widowers. The youngest woman was a girl of 13 years of age to a man of 23 years.

A large number of young persons were married during the year, viz.: two grooms of 16 severally to brides of 18 and 19; eleven of 17 years, severally to brides one each of 14, 15 and 16 years, five of 17 and three of 18 years; 55 of 18, 151 of 19, and

232 of 20 years each. Of the young brides, 1 was 13 years of age, 11 of 14, 63 of 15, 176 of 16, and 320 of 17 years. The following table will show, on inspection, all the first marriages of parties where the male was under 20 and the female under 17:—

Ages of Males.	AGES OF FEMALES.																				Total.
	13.	14.	15.	16.	17.	18.	19.	20.	21.	22.	23.	24.	25.	26.	27.	28.	30.	31.

	1	11	63	176	321	82	74	81	40	26	8	13	3	3	1	2	3	1	909		

The number of marriages where both parties were severally united for the first time, was 9,740 of the whole number, 12,265 reported for the year 1856. The oldest male in this class was between the age of 60 and 65 years, and the oldest female was about of the same age. The ages of 61 males and of 101 females were not ascertained.

In the cases of first marriage of the male, but of subsequent marriage of the female, the number amounted to 467. In the case of the youngest of the matches, both parties were under 20 years of age. The oldest man was between 75 and 80, and the oldest woman between 60 and 65 years of age. The ages of 3 males and 5 females were unascertained.

Of the marriages of widowers to maidens, there were 1,222. No male was under 20 years of age, although 118 females were. The oldest male was between 75 and 80, and the oldest female between 65 and 70. Nine males and seventeen females of this class did not record their ages at the time of their marriages.

Of the subsequent marriages of both parties there were 705. The youngest male was over 25, and the youngest female was over 20 years of age. The oldest man was over 80, and the oldest woman between 70 and 75. The ages of five men and nine women appertaining to this class, were not returned for registration.

In 131 cases the conditions of the parties were not reported, and of these the ages of 105 parties were also unascertained.

The ages of each couple at marriage, in Boston, is shown in the following table:—

AGES OF MALES.	AGES OF FEMALES.										
	Under 20.	20 to 25.	25 to 30.	30 to 35.	35 to 40.	40 to 45.	45 to 50.	50 to 60.	60 to 70.	Unknown.	Totals.
Under 21,	29	27	4	—	—	—	—	—	—	—	60
21 to 25,	229	550	95	15	3	—	—	—	—	—	892

Totals,	387	1152	609	209	85	40	20	13	3	18	2536

It therefore appears, that there were married in Boston 60 males under 21 years of age,—one less than were married the previous year, making 2.36 per cent. of the number married. Four of these married females between 25 and 30 years of age; 892, or 35.17 per cent. of the males, married between the ages of 21 and 25; and 856, or 33.75 per cent., married between 25 and 30 years. Of the 892 males between the ages of 21 and 25, 229 married females under 20 years of age; 550 took partners who were about the same age; 95 chose wives whose ages were above 25 years; 15 selected partners of females over 30 years; while 3 took wives who were above 35 years. Of the males, 27 over 30 years, 6 over 35, 1 over 40, and 3 over 50 years, married females under 20. Fifty-one gentlemen between 50 and 60 were married, 3 to maidens under 20, 4 to females between 25 and 30, 10 between 30 and 35, 9 between 35 and 40, 10 between 40 and 45, 8 between 45 and 50, and 6 between 50 and 60. There were 11 males married who had passed their 60th year, while 3 had left behind their 70th year. There were 76 females married who had passed their 40th year, and 13 their 50th; while but 3 females over 60 years became brides. The favorite matrimonial period for both sexes was between 21 and 25; the next was between 25 and 30.

The condition and usual residence of the parties married in Boston in 1856, are thus given:—

MALES.	Females—No. of times Married.					Residences at time of Marriage.		
	First.	Second.	Third.	Unk.	Totals.		Males.	Females.

The first marriages of males in Boston, it will be seen, amount to 2,149, or nearly 84.74 per cent. of all the marriages : 546 were second marriages, 32 were third, while only a single fourth marriage took place, which was of a gentleman of the age of 71 with a maiden of 31. The first marriages of females numbered 2,230, or 87.93 per cent. of all the marriages. Of these, 1,984 were united to males who had never been married : 227 married widowers ; 18 married men who had been widowed twice, while one ventured to take a gentleman whose essays in the matrimonial line had been made three times before. The condition of eight non-resident couples is unknown. The residence of 1,923 males at the time of marriage was in Boston ; 481 resided in other towns in the State, and 132 belonged out of the State. Of the females, 2,103 resided in Boston ; 333 in other parts of the State ; and 70 came from other States. Of the whole number of marriages, 24 were of couples, one or both of whom resided in the city, but who were married in other States. The law requires such parties to register their marriages on their return to the city. There were 397 instances in which the brides were older than the grooms. There were 46 colored couples married : and 12 colored males married white women. There was one instance where the groom was white and the bride colored.

Among the males married in Boston, there were 60 minors, 43 of whom were 20 years of age ; 10 were 19 ; 5 were 18 ; 1 was 17, and 1 was 16. The latter married a female 19 years of age.

Among the females married, there were 206 under 19 years of age ; 143 of 18 years of age ; 45 of 17 ; 15 of 16 ; 2 of 15 ; and 1 of 14.

DEATHS.

During the year ending on the 31st day of December, 1856, there were registered in the various cities and towns throughout the State of Massachusetts, and subsequently returned to the office of the Secretary of the Commonwealth, 20,734 deaths, falling short 64 of the number reported as having been recorded during the previous year. In the Report of last year there was also a falling off in deaths, the difference between the numbers reported for the years 1854 and '55, being 616. An increase of 1,113 deaths over the number of the preceding year, was shown in the abstracts prepared for the Thirteenth Annual Report, embracing the results of registration for the year 1854. Certainly with such undeniable statistical evidence, it may be said with much confidence, that during the year in question the Commonwealth has presented an unexampled degree of prosperity as far as can be determined by the occurrence alone of deaths.

Of the whole number of deaths reported as having occurred during the year 1856, above stated to have been 20,734, 10,201 were of males, 10,401 were of females, and 132 were of persons whose sex was not ascertained for registration. Of the 132 of unascertained sex, 102 were of infants under one year of age, and 12 of persons whose ages were not reported, leaving only 18 of persons known to have attained more than one year of age, and of these only three were over ten years of age. This certainly shows that much more care than usual has been taken, in collecting facts in reference to this particular. The results generally shown in the Massachusetts Reports, in regard to the proportion between the sexes of the deceased, have been sustained by the facts collected for this Report, namely, that more females than males, by 200, have died during the year in Massachusetts. These particulars will be more evident if viewed in connection; therefore the following table has been prepared, covering the results of the last five years of registration, with the annual average of the five years, and the annual difference between each two con-

secutive years, the sign + signifying an increase, and — a decrease in the number:—

	Total.	Males.	Females.	Excess of Females.	Excess of Males.	Unkn.
1852,	18,482	8,978	9,396	418	—	108
1853,	20,301	9,942	10,210	268	—	149
1854,	21,414	10,710	10,558	—	152	146
1855,	20,798	10,285	10,386	101	—	127
1856,	20,734	10,201	10,401	200	—	132
Total for 5 years, . . .	101,729	50,116	50,951	835	—	662
Annual average for 5 yrs.	20,346—	10,023+	10,190+	167	—	132+
Difference 1852 and 1853,	+1,819	+964	+814	—150	—	+41
Do 1853 and 1854,	+1,113	+768	+348	—120	—	— 3
Do 1854 and 1855,	— 616	—425	—172	+253	—	—19
Do 1855 and 1856,	— 64	— 84	+ 15	+ 99	—	+ 5

This exhibits an aggregate of 101,729 deaths during the five years, 1852–56, with an average of 20,356, or 358 less than the number of those which occurred in the year 1856. During the same period of time there was an excess of deaths among females amounting to 835, giving an average of 167 to a year, or only 33 less than the excess in 1856. The average number of the deaths of those whose sex was undetermined during the five years, amounted to 132, exactly the same number as that reported in 1856. It will also be seen, that only in one of the above years, namely, 1854, was there an excess of male deaths reported as having occurred within the Commonwealth, and that in this instance this excess only amounted to 152. The rule, therefore, generally laid down in preceding Reports, as holding true in Massachusetts, that more females than males die during the year, may be considered as strengthened by the results of an additional year of registration.

Omitting the consideration of the deaths of those persons whose ages were not obtained for registration, the aggregate ages of the 20,483 individuals whose ages were given, amounted to 552,481, being an average of 26.97 years for the duration of life

in Massachusetts, by the returns made for registration, showing, when compared with the results obtained from similar sources in 1855, a loss of .46 of a year to an individual. The tables of former years show for each person, on an average, 27.73 years of life according to the deaths in 1852; 26.87 in 1853; 27.16 in 1854; and 27.43 in 1855. It is therefore evident, that in this point, the past year does not exhibit so good an account as the preceding four years. In the several counties there was a great variation as to the average ages of the persons who died: in Dukes County, the limit reached its highest, 45.53 years to a person, on an average; in the county of Suffolk, only the extent of 19.98 years was the average period of life; in the county of Middlesex, it reached only to 25.31 years; in the counties of Bristol, Essex, Hampden and Worcester, a little over 28 years; in the county of Nantucket, 27.43 years; and in the other counties varying from 29.28 to 34.64 years, the latter term of life being that of those who died in the county of Franklin. This diversity in the average duration of life, in the different parts of the Commonwealth, undoubtedly arises from the fact, that in those parts which are more generally the abodes of foreigners, especially those of Celtic origin, there is a much greater mortality among young children, than in other portions of the State where the population is more purely native. For there is very good reason for believing, that the early mortality of the offspring of immigrants is much greater than that of the native born. It is generally conceded, by all who have made inquiries on the subject, that the duration of life of the Celt is much less than that of persons of Teutonic blood; and in general, it is a well established fact, that the expectation of life is much lower among the destitute and poor, who have scanty clothing, unwholesome food, and uncomfortable, damp and unventilated dwellings, than among the more prosperous and richer class of persons, who have all the comforts of life together with all the means of combatting disease. In many respects, the mountain regions of the Commonwealth, with their pure, bracing atmosphere, nourishing food, and more quiet modes of living, are more conducive to health and long life, than the sea girt portions of the State, with their changeable temperatures and searching winds. Add to these the peculiarities of life and occupation, with the great unevenness of the distribution of the ordinary vicissitudes of existence, and the reasons for the great difference

in respect to the average duration of human life in different parts of the State will be well accounted for.

The greatest number of persons die annually in Massachusetts in the early periods of life. The tables connected with the present Report show, that 4,226 persons—2,234 boys, 1,890 girls, and 102 of unknown sex—died under one year of age, being more than one-fifth of all the deaths during the year. About four-tenths of the deaths (80.38) were of children under five years of age, whereas only about one-tenth (23.51) died between the ages of 20 and 30 years.

In the following table, which has been prepared to exhibit certain interesting facts compiled from abstracts, embracing the results of the years 1852–56, it will be noticed that more boys than girls have died under five years of age, whereas of adult persons between 20 and 30 years of age, the greatest number has been among the females. Dividing the persons who have died during the year 1856, into three classes: the young or dependent, under 20 years of age, the middle aged or supporting class, between the age of 20 and 60 years, and the old, over 60 years of age, and it will be perceived that the numbers are quite unlike: for instance, there were 10,142 persons in the first of these classes, 5,244 males, 4,781 females, and 117 of unknown sex; 6,927 persons in the second class, 3,114 males, 3,611 females, and 2 of unknown sex; and in the last class 3,698 individuals, 1,763 males, 1,937 females, and 1 of unknown sex. Besides these, there were 167 which could not be placed in either of these classes, on account of deficient registration, as their ages were not ascertained, namely, 80 males, 75 females, and 12 of unknown sex, making the aggregate number of deaths, as before stated, 20,734—10,201 males, 10,401 females, and 132 of unascertained sex. During the five years for which the table was constructed, the mortality in Massachusetts amounted to 101,729—50,116 males, 50,951 females, and 662 of those of unascertained sex. Of these, 20,781 were under one year of age, comprising 11,245 boys, 9,061 girls, and 475 of unknown sex. There were 39,010 deaths of persons under five years of age—20,782 boys, 17,864 girls, and 544 of unreported sex—showing a greater proportion of deaths among males than females in the early periods of life. Between the ages of twenty and thirty, there were 11,677 deaths, namely, 4,888 of males, 6,787 of females, and only 2 of unknown

sex, exhibiting a much larger number of females than of males. Of the persons who died having attained more than 30 years, there were 51,042—24,446 males, 26,480 females, and 116 of persons of unknown sex; giving, as in the previous period mentioned, a large preponderance of females. The facts shown for the years 1852-56, in the aggregate, are equally true for each year of the five.

Arranged according to time of death, it will be perceived, that in the year 1856, the greatest mortality occurred throughout the Commonwealth in the months of September and August, and the least in the months of June and February. In the following table, the months are arranged according to the greatest number of deaths, together with the number and percentage in each, and also with the aggregate and average:—

MONTH.	Deaths.	Per cent.	MONTH.	Deaths.	Per cent.
September,	2,224	10.73	April,	1,532	7.38
August,	2,163	10.43	May,	1,515	7.31
December,	1,955	9.43	February,	1,450	6.99
October,	1,917	9.25	June,	1,386	6.69
July,	1,697	8.18	Unknown,	32	.16
November,	1,676	8.08	Aggregate,	20,734	100.00
March,	1,638	7.90	Average,	1,728	8.33
January,	1,549	7.47			

It will be seen that the deaths were so apportioned throughout the year, that in only four months, September, August, December and October, were there more than the average. In no month in 1856 were there as many deaths as in 1855, September being the most fatal in both years, and the former exhibiting 2,224 deaths to the latter 2,520. The least number of deaths in any one month in 1856, was 1,386 in June, and in 1855, 1,405, also in June.

On the following page (220) will be seen a table exhibiting the nativities of the persons who died in 1856, arranged according to sex, and the county in which the deaths occurred. It will be noticed that the nativities of 19,869 individuals were ascertained, no returns being made with reference to this particular, in the case of 865 persons who died during the year. Of those whose nativities were recorded, 9,819 were males, 9,948 were females, and of 102 there was no statement as to sex. Of the 865 persons whose nativity was not obtained, 382 were males, 453 were females, and 30 were of unknown sex. There died 16,678 persons of American nativity,—comprising 80.44 per cent. of all who died during the year,—8,186 males, 8,391 females, and 101 of unknown sex. Of the 3,191 of foreign birth who died in Massachusetts, amounting to 15.38 per cent. of all the deaths, 1,633 were males, 1,557 were females, and 1 only was of unknown sex. In the counties of Barnstable, Dukes and Nantucket, the greatest relative proportion of Americans died, and the smallest in the county of Suffolk. On pages 221 and 222 are printed valuable tables, prepared for the purpose of exhibiting similar facts for the three years, 1854, '55 and '56, together with several interesting calculations.

Nativities of Persons who died during the year 1856.

There have died in the State Almshouses during the year 1856, 439 persons, being 205 less than the number reported for the year 1855. Of these, 205 died in Bridgewater, 58 in Monson and 176 in Tewksbury.

Four persons were reported to have died during the year 1856, more than one hundred years old. These were all widows, and died of old age. Two of them were of American nativity and two of foreign. One born in Roxbury, in the county of Norfolk, died in Boston on the 11th of January, aged 100 years and 11 months; another reported to have been born in Dover, in the State of New Hampshire, died in the city of Lowell on the 2d of March, aged 103 years 11 months and 3 days; the third, born in Ireland, died also in the city of Lowell, on the 4th of September, at the very advanced age of 107 years 11 months and 10 days; and the fourth, also born in Ireland, died in Boston on the 17th of September, 1856, at the extreme age of 110 years. Thus it appears, that the centenarians who died in 1856, in Massachusetts, were females and had been married, and that they died apparently of no other cause than that of general decay of their system consequent to old age.

The report of the City Registrar of Boston shows, that there were 4,253 deaths in the capital of the Commonwealth during the year 1856, an increase in number of 173 over that of the preceding year. The following facts relating to the mortality in Boston, are taken from Mr. Apollonio's minute report, made to the city council in January last. The increased mortality of the year 1856 over 1855, occurred chiefly in the months of November and December, the returns showing a difference of 70 in the former and 101 in the latter, over the corresponding months in 1855, which the Registrar attributes to the great fatality caused in those months by scarlet fever. The deaths in the different wards of the city, together with the percentages of deaths according to locality, and in reference to the population as taken in 1855, are given in the following table:—

WARDS.	Population.	Per cent. of Population.	Number of Deaths.	Per cent. of Deaths.
I.	19,261	11.83	631	11.90
II.	15,963	9.80	509	11.96
III.	13,175	8.09	318	7.47
IV.	7,912	4.86	119	2.79
V.	10,428	6.40	343	8.06
VI.	11,597	7.12	215	5.05
VII.	18,430	11.32	472	11.09
VIII.	12,690	7.79	328	7.71
IX.	9,541	5.86	212	4.98
X.	12,553	7.71	310	7.28
XI.	13,264	8.15	328	7.71
XII.	17,931	11.01	465	10.93
	162,748	99.94	4,253	99.93

An examination of the facts given above and compared with those of the previous year, will exhibit a considerable difference. In eight wards, the first three, the 5th, 6th, 9th, 10th and 11th, this year's table shows an increase in the number of deaths, while wards 4, 7, 8 and 12, exhibit a considerable decrease. In ward 3 there is an increase of three deaths, but the percentage is slightly diminished. In ward 4 there are recorded 119 deaths, being 2.79 per cent. only of all the deaths, against 135 deaths, and a percentage of 3.30 of the previous year. Wards 7, 8 and 12, present the most favorable change: the first showing the diminished number of 472 deaths, with a percentage of 11.09 against 513 deaths, and 12.57 per cent., and the latter 465 deaths and a percentage of 10.93, contrasted with 526 deaths and 12.89 per cent. Ward 6 has retrograded. The number that died there in 1855 was only 160, making 3.92 per cent. of the whole number of deaths. This year's table gives 215 as the number of deaths, and 5.05 as the percentage. The greatest increase was in ward

6, being 55 deaths; and the greatest decrease in ward 12, amounting to 61. It is proper to state, that the deaths in ward 2 comprise 100 that occurred in the State Hospital at Rainsford Island, and 34 that took place at Deer Island. Ward 5 also includes 118 deaths that occurred in the Massachusetts General Hospital, and 5 in the Suffolk Jail; and in South Boston (ward 12,) 31 deaths occurred in the Lunatic Asylum, and 11 in the House of Correction. This explanation will serve to restore wards 2 and 5 somewhat to a level with the sanitary condition of the other wards; but no such explanation can be given for the north-end ward. Although the population of ward 1 is the largest of the twelve,—making 11.83 per cent. of the entire population,—there is no explanation why the deaths there should amount to nearly 15 per cent. of the entire mortality. The aggregate ages of all who died in Boston during the year 1856, amounted to 83,743 years,—giving an average age of 19.69 years to each individual, while in the previous year the average age was 19.88. If the aggregate ages of those who died from casualties, be deducted from the gross amount, the average age will be 19.39 years, a considerable reduction from the result of the preceding year, when the average age was nearly 21 years. If the sum of the whole be apportioned between the sexes, (excluding casualties,) the aggregate ages of the males will amount to 36,566 years, giving to them an average age of 17.77 years. The aggregate ages of 1,970 females, (exclusive of 64 who died from casualties,) amounted to 41,520 years, which gives an average of over 21 years. In the previous year, the average age was over 22 years. The aggregate ages of those who were native born, amounted to 37,374 years, allowing an average age of 24.58 years. Native born males number 773, giving 21.53 years to each. Native born females number 747. Their aggregate ages, 20,724, yielded an average of 27.74 years, being more than six years in their favor over the males.

The number of foreigners who died in Boston during the year 1856, (including all under 21 years of age born of foreign parents,) was 2,733. Their aggregate ages amounted to 46,368 years, which allows them an average age of 16.96 years, more than seven years below the average age of the native born population. The aggregate ages of foreign males amounted to 24,080, and allow to that sex the average age of 16.65 years. The average age of

foreign females amounts to 17.31, being nearly one year in their favor over the males, but falling more than ten years below that of the native born females.

There died in Boston 537 married males,—twenty less than were reported the preceding year,—and furnishing 12.62 per cent. of all the deaths, and 24.20 of all the males. Of the whole number, foreigners furnish 336, or 62.56 per cent. Of widowers, there died 64,—33 native and 31 foreign born,—four more than died the previous year. The number of married females that died is 471, or over 11 per cent. of all the deaths, and 23.15 per cent. of the females. Of the entire number, foreign females contribute 276, or 58.59 per cent. It will be observed, that of the deaths among the married portion of the community, the foreign born contribute much the largest number; while among the widowers and widows the scale is slightly turned the other way.

The number of colored persons that died in Boston during the year, was 71,—being eight more than in the preceding year. Of these, 38 were males and 33 females. The aggregate ages of these amounted to 1,964 years, giving to them an average age of 27.66. The aggregate of the ages of the males is 1,142 years, of the females 822, allowing to the former an average age of 30 years, and to the latter very near 25 years. According to the census of 1855, the deaths among the colored population were as one in 31.26—a slight advance on the result of the previous year. Among the whites the rate of mortality is as 1 in 38.38, against 1 in 39.96 the previous year.

There were two deaths of centenarians, both females, reported as having reached the ages of 101 and 110 years, and alluded to on a previous page.

The following table will show at a glance, the number of deaths of both sexes, that occurred in the city during the year in question :—

MONTH.	Males.	Females.	MONTH.	Males.	Females.
January,	164	169	August,	241	214
February,	168	141	September, . . .	214	217
March,	190	167	October,	173	184
April,	166	155	November, . . .	181	173
May,	165	145	December,	226	201
June,	155	120			
July,	176	148		2,219	2,034

The number of stillborn children usually recorded with the deaths in Boston, amounted in that city to 273—161 males and 112 females, an increase of 45 over the number reported in 1855. Three of the males were triplets.

The deaths in 1853—1856 in Boston, are thus classed, according to the ages of those who died, with percentages :—

AGES.	1853.		1854.		1855.		1856.	
	Deaths.	Per cent.	Deaths.	Per cent.	Deaths.	Per cent.	Deaths.	Per cent.
Under 1 year, .	1,064	24.83	982	22.11	1,015	25.61	1,017	23.91
1 to 5 years, .	1,074	25.07	965	21.72	964	23.62	1,038	.40
5 to 10 years, .	196	4.57	183	4.12	152	3.72	195	4.58

15 to 20 years, .	131	3.05	152	3.42	135	3.30	133	3.12
20 to 30 years, .	456	10.61	583	13.12	469	11.49	499	11.73
30 to 40 years, .	421	9.82	560	12.06	423	10.36	409	9.61
40 to 50 years, .	289	6.74	366	8.24	273	6.69	331	7.78
50 to 60 years, .	213	4.97	205	4.61	209	5.12	193	4.53
60 to 70 years, .	181	4.22	190	4.27	151	3.70	171	4.02
70 to 80 years, .	116	2.07	116	2.61	130	3.18	123	2.89
80 to 90 years, .	63	1.47	50	1.12	62	1.51	61	1.43
90 and upwards, .	9	.21	7	.15	11	.26	13	.30
Totals, . . .	4,284	100.00	4,441	100.00	4,080	100.00	4,253	99.94

The number of children that died under one year of age, is 28 less than in the previous year. Such is also the case in regard to those dying in each of the five periods between 15 and 20, 30 and 40, 50 and 60, 70 and 80, and 80 and 90. Of the 1,017 children who died under one year, 96 or 9.43 per cent. died on the day of their birth ; of these, 80 were of foreign parentage. Of the whole number that died under one year, 383, or 37.65 per cent. died over the age of six months. Of this number the children of

foreign parents comprise 303, or 79.11 per cent. Those dying under six months, number 634, or 14.90 per cent. of all the deaths, and of which the children of foreign parents number 437, or 68.92 per cent. Of 1,800 persons who died over 20 years of age, 1,001, or 55.61 per cent. were foreign born. Of these, persons born in Ireland make 83.11 per cent.

The nativities of those who died in Boston during the year 1856, are given below:—

BIRTHPLACES.	Males.	Females.	BIRTHPLACES.	Males.	Females.
Boston,	1,199	1,066	Ireland,	475	452
Massachusetts, except Boston,	189	201	England and Wales, .	40	33
Maine,	61	81	British Provinces, . .	36	48
New Hampshire, . .	53	45	Germany, and North of Europe,	31	21
Vermont,	17	13	Scotland,	13	8
Rhode Island, . . .	9	8	Other Foreign Places,	20	6
Connecticut,	6	9	At Sea,	2	1
Other American States,	52	37	Unknown,	13	5
Totals,	1,586	1,460	Totals,	633	574

It will be noticed, that 3,046 of the 4,253 who died in Boston, were born in the United States—1,586 males and 1,460 females, and that 1,207—633 males and 574 females, were foreigners.

Judging from the results of registration during the past year, it is fair to infer that the year was not more unhealthy than usual.

CAUSES OF DEATH.

In the returns from the recording officers causes were reported for 20,744 deaths of the 21,429 which occurred during the year 1856, leaving for 113 no causes so sufficiently defined as to admit of classification, and for 572 no assignable causes whatever. Excluding 695 cases of stillborn children, which, according to the plan of preceding Reports, have been treated of in the remarks on births, and also the 575 cases reported without causes, the 20,162 remaining cases are given as including the deaths of 9,913 males, 10,140 females, and 109 persons of unknown sex. Of the 572 persons who died without return being made of the cause of their decease, 288 were males, 261 were females, and 23 were of unknown sex. Of stillborn children there were 384 males, 232 females, and 79 of unascertained sex. The causes reported will be found in table VII., on pages 84-97, of the preceding Abstract, arranged in alphabetical order, according to the ages of each sex, by decadal periods, and for the twelve months of the year.

A classification of the numerous causes of death, arranged by counties, similar to that presented in the last Report, has been prepared with reference to particulars collected during the twelve months ending on the 31st of December, 1856, and will be found in table VIII., on pages 98-105. The nomenclature and arrangement of the diseases are in accordance with the recommendations in the latest English reports relating to registration. In table IX., commencing on page 106, are given the classified causes of death, and the percentage of each cause, severally, for each of the five years of registration, 1852-56 inclusive, together with their aggregates and annual averages; and there are also given, in the same table, the whole number and percentage of deaths reported since the commencement of registration in Massachusetts, on the first day of May, 1841, and extending fifteen years and eight months, to the last day of December, 1856.

By the new classification, the diseases which constitute the active causes of death have been divided into five classes, com-

prising twenty-four orders and numerous subdivisions. These are exhibited in the accompanying table, in a manner best adapted for showing the results of the year 1856, compared with those deduced from a period embracing fifteen years and eight months:—

CAUSES OF DEATH.	WHOLE NO. OF DEATHS.		PERCENTAGE.	
	One year, 1856.	Fifteen years and eight months, ending December 31, 1856.	One year, 1856.	Fifteen years and eight months, ending December 31, 1856.

6. Other Violent Causes,	291	3,010	1.40	1.35

As the causes of death given in the accompanying abstracts, are the only means that can be used for the groundwork of the following remarks, and these causes are derived entirely from the reports of collecting officers, in many cases, not conversant with diseases nor systematic arrangements, it cannot be expected that the analysis of the mortuary statistics should be otherwise than of a very general character. This must necessarily be the case so long as the only information for record is received through channels destitute of any particular responsibility, and when frequently it is an object for unprincipled and ignorant persons, employed in getting a dishonest livelihood by tampering with the health of their fellow beings, to falsify returns, or, as too often occurs, to report in an indeterminate or ignorant manner.

The most fatal class of diseases during the year 1856, as will be noticed in the preceding table, is that which has generally contributed most to the deaths throughout the Commonwealth, and which is designated by the classification adopted in the present and last Reports, under the name of Constitutional diseases, and producing 6,365 deaths, or 30.69 per cent. of all the mortality of the State during the time under special consideration. This is a diminution of 292 deaths by this class, or of about one per cent., which may have been added to the Zymotic or Violent, each of which has increased in about the same ratio, the Local remaining about the same, and the Developmental having been diminished in the same proportion as the Constitutional. It has been frequently mentioned in previous Reports, that the diseases classed as Zymotic and Constitutional have, combined, been the causes of more than half of the annual mortality in Massachusetts. According to the present table it will be seen, that 57.7 per cent. of the deaths during the last year in the Commonwealth were from these causes, and that they correspond with the general mortality for the last sixteen years. The same order will be observed in the consideration of the various causes of death, that was first adopted and used in last year's Report.

SPECIFIED CAUSES.—The specified causes of deaths, according to the arrangement adopted in this Report, are divided into five classes, the *Zymotic*, *Constitutional*, *Local*, *Developmental*, and *Violent*.

ZYMOTIC CAUSES.—The diseases embraced in this class are those which are generally designated as being either epidemic, endemic, or contagious, and are induced by some specific body, or by the want of or by the bad quality of food. They form a very numerous class of most destructive agents, producing about 29 per cent. of all the deaths within the Commonwealth. The class comprises four distinct orders, each of which is subdivided. The first order consists of *Miasmatic Diseases*, diffusible through the air or water, and attended by fevers, and the matter by which they are communicated is either derived from the human body by infection, or from the earth, as in agues. The second order comprises the *Enthetic Diseases*, which are the more strictly contagious, such as are communicated by contact or inoculation. The third order includes *Dietic Diseases*, which originate from an unhealthy condition of the blood, owing to the consumption of improper or bad food. The *Parasitic Diseases* form the fourth order of this class, and are manifested by their effects upon the skin, alimentary and intestinal canal, and the general structures of the body. A large portion of the most destructive of this class is comprised in the first of these orders, and, on account of the interest which they excite in the medical community, will receive particular notice in the following remarks:—

Smallpox.—The whole number of deaths attributed to this loathsome disease was 140, a decrease of 188 from that reported last year. Of these, 77 occurred to males and 63 to females. The greatest number of deaths was in February, March and January, in the order named—only 6 happening after the month of July. Deaths by *chicken-pox* and *varioloïd* are included under this head in the abstracts.

Measles.—Since the last year there has been an increase of 50 in the number of deaths by this disease—174 being reported for registration for the year 1856, being .84 per cent. only of the deaths in the Commonwealth during that year. In 1855, there were 124 deaths by this cause; in 1854, 325; in 1853, 226; and in 1852, 141. In fifteen years and eight months of registration there were 2,286 fatal cases of this disease.

The following tables, covering a space of time amounting to eight years, from January, 1849, to December, 1856, inclusive, will exhibit interesting particulars relating to this cause:—

DEATHS BY MEASLES.

Deaths during Eight Years, 1849-56, showing the Number of Deaths in each County during the first four, and also during each of the last four years, together with the Aggregate, Percentage, and Ratio to the Census of 1855.

COUNTIES.	1849 to 1852.	1853.	1854.	1855.	1856.	Aggregate for 8 years.	Percentage.	Population in 1855.	To the Pop. one in every

Of those who died of measles, 89 were males and 85 were females. The largest portion of these—79 boys and 71 girls—died under five years of age, and 14 more died before arriving to the age of ten years. A very large proportion of the fatal cases happened in the first seven months of the year, the largest number being recorded in January. Very nearly half died in the county of Suffolk, and nearly all in the counties of Suffolk, Middlesex, Worcester and Essex.

Scarlatina.—There were, during the year 1856, 1,252 deaths by this disease, being 6.04 per cent. of all the deaths in the Commonwealth, a very large increase over the number reported in the previous year, and much exceeding that of the year 1853, when the disease was very prevalent and exceedingly fatal in its results. Among the males there were 619 deaths, among the females 629, and there were 4 deaths of persons of unknown sex. In 1851, the number of deaths by this cause was 389—190 of males, 196 of females, and 3 of unknown sex; in 1852, 843 deaths—415 of males, 427 of females, and 1 of unknown sex; in 1853, 1,005 deaths—495 of males, 505 of females, and 5 of unknown sex; in 1854, 490 deaths—255 of males, 233 of females, and 3 of unknown sex; and in 1855, 247 deaths—173 of males and 174 of females. Thus it will appear, that there has been an excess in number, during the year 1856, of 805 over that of 1855; of 762 over that of 1854; of 247 over that of 1853; of 409 over that of 1852; and of 863 over that of 1851.

With the exception of consumption and the diseases generally classed as infantile, no cause has produced so many deaths within the Commonwealth during the past year, as has scarlet fever. The greatest mortality, 371 deaths, occurred in the county of Suffolk; and 202, 184, 139, and 126 deaths, severally, were reported for the counties of Middlesex, Worcester, Bristol and Essex. In the city of Boston alone, there were no less than 362 fatal cases of this disease, being 8.51 per cent. of all the deaths in the city during the year, where, in the later months, the mortality arising from this cause had become alarmingly frequent; so much so that 115 deaths were reported as by it during the month of December.

An examination of the following tables, containing the results of registration in Massachusetts for a period of eight years—1849–56—will show very interesting facts relating to this most dreaded of all the diseases of youth:—

DEATHS BY SCARLATINA.

The mortality throughout the State in the year 1856, was much the greatest in the months of November and December, in the last of which the number of deaths by scarlet fever amounted to 383.

It seems, from the tables, to have proved most fatal in the early periods of life, very few persons dying of it at ages over 15 years. Under five years of age, 886 children died—455 boys, 429 girls, and 2 persons of unknown sex. Between the ages of five and ten years 279 persons died—123 boys, 154 girls, and 2 of unknown sex; and between the ages of ten and fifteen years, 27 males and 25 females. Therefore, it appears, that 1,217 persons were, at the time of their decease, under fifteen years of age, and only 35 persons had arrived to a greater age.

Early in the last century, (1735–36,) scarlatina appeared in a most fearful manner in New England, producing a large mortality. Especially in the years 1801 and 1833, it exhibited a very great degree of virulence. With the exception of the winters of 1852–3 and 1856–7, the disease has not been so fatal as the years alluded to above.

Quinsy.—The number of deaths by quinsy has nearly doubled since the previous year, when 21 only were reported. In 1856, according to the returns, there were 41 cases of this disorder which proved fatal in the Commonwealth—22 of males and 19 of females, including 5 cases of a kindred complaint. These occurred chiefly to young persons throughout every season of the year.

Croup has not been unusually severe in its results during the past year, there being 18 less deaths reported as being caused by it than in the previous year. From the tables it appears, that the whole number of deaths by this disease in Massachusetts, amounted in 1856, to 519, somewhat less than that of either of the three years that immediately preceded it. Of these deaths, 271 were of males, 246 of females, and 2 were of persons whose sex was not reported for registration. During the three years preceding, there had also been a gradual diminution in the number of deaths from this cause, namely, of 25 from 1854 to 1855, and of 46 from 1853 to 1854, and of 89 from 1853 to 1856. The percentage of deaths, compared with those from all causes, was in 1856, 2.50, whereas during the fifteen years and eight months of registration, it was only 2.34. So it is evident, that for the long period of time there is a slight percentage in increase. The following tables show the results of this cause for eight years:—

DEATHS BY CROUP.

Arranged by counties, the greatest number of deaths by this disease will be found to have occurred in the county of Suffolk, where there was a great diminution from that of 1855. In Suffolk there were 129; in Middlesex, 94; in Essex, 58; in Worcester, 49; in Norfolk, 41; in Bristol, 40; in Hampshire, 29; in Berkshire, 28; in Plymouth, 20; and in Barnstable, Franklin, Hampshire, and Dukes and Nantucket, severally, 10, 9, 6 and 6.

Only 10 of the 519 deaths occurred to persons over ten years of age, and of these 6 were under fifteen. The large number of 233 boys, 218 girls, and 1 person of unknown sex died under the age of five years, making in all, 452 deaths. Between the ages of ten and fifteen, 57 died—31 boys, 25 girls, and 1 of unknown sex.

The most fatal months for croup were November, December, October and March, when 70, 66, 58 and 51 deaths severally occurred.

Whooping Cough.—The whole number of deaths by this cause amounted, in the year 1856, to 232—of which 111 were of males, 120 of females, and 1 of a person whose sex was not reported. The greatest number of deaths were in the months of September, August, February and March, and all excepting 8 were of children under five years of age. More than one-quarter of the children who died of whooping cough, were returned from the county of Suffolk, and more than one-fifth were from the county of Middlesex. In the county of Barnstable there occurred but one fatal case of this disease, as was the case in the counties of Dukes and Nantucket. In the four western counties, Berkshire, Franklin, Hampden and Hampshire, there were but 16 persons whose deaths were registered as having been caused by this complaint.

Typhus.—It has been customary, in the Massachusetts Reports, to class under this cause all the deaths resulting from *Typhus Fever*, properly speaking, and those reported for registration under the more general terms, *Fever*, *Typhoid Fever*, *Ship Fever*, and *Bilious Fever*; and perhaps, for the common purposes of registration, the plan has been sufficiently exact. During the year, the whole number of deaths included under this head amounted to 960, a large falling off from former years—1,098 being the number returned for 1855, 1,087 for 1854, and 1,170 for 1853. Of this number, 486 of the persons were males, 473 were females, and of 1 the sex was unknown. The particulars of the last eight years will be seen by examining the following tables:—

DEATHS BY TYPHUS.

It will be noticed, that 8,399 persons have died of this cause during the eight years, 1849-56, giving an average of about 1,050 a year. At least one person out of 135 of the whole population of the Commonwealth, has been a martyr to typhus fever during this term of eight years.

During the few last years, a considerable change has taken place as to the prominent seats of the disease throughout the Commonwealth. In the county of Suffolk, where the mortality has been very great in some years, there has been only half as many deaths by this cause as in the county of Worcester, and even much less than in the counties of Essex and Middlesex, all of which, however, show a less number of deaths by it than in the previous year.

Of the 960 persons who died of Typhus during the year, of which these remarks specially treat, 342—about one-third—died under twenty years of age; 218 between the ages of twenty and thirty years; 134 between thirty and forty; and the remainder, with the exception of 7 of unknown age, died at a more advanced age. The period of life in which the greatest mortality occurred, was that between the ages of fifteen and twenty years; and only 96 persons died over five years of age and under fifteen. These results are very nearly the same as those exhibited for the aggregate of the eight years given in the tables on the preceding pages, and also as deduced for a long period of time, from the abstracts published in the Massachusetts Registration Reports.

The greatest mortality occurred in the months of October, September, November, December, August and July, and the least in May, June, April, February, January and March. During eight years of registration last past, more than 15 per cent. of the annual mortality occurred in the month of October, and only about 5 per cent. in June.

Erysipelas.—There were 172 fatal cases of this disease during the year, an increase of 13 over the number reported the previous year, and 50 over that for the year 1854, although 3 less than that for 1853, and 14 over the average of the last five years. The percentage of deaths by this disease, compared with the whole number reported for the year, was .83. Of these, 105 were males and 67 females.

Many facts of an important and interesting character, can be deduced from the following tables:—

DEATHS BY ERYSIPPELAG.

During the fifteen years and eight months of Massachusetts registration, there occurred within the Commonwealth 1,925 deaths by Erysipelas. Of these, 163, or .88 per cent. of all the deaths from known causes, were in 1852: 175, or .88 per cent., in 1853; 122, or .55 per cent., in 1854; and 159, or .76 per cent., in 1855.

While the greatest mortality was among children under five years of age, nevertheless very few (14) died between the ages of five and twenty years. It may be fairly inferred, that about 28 or 30 per cent. of the deaths by this disease, occur to children under five years of age.

In a total of 1,300 deaths during the eight years, 1849-56, 674 were males and 623 females; of 3 persons only the sex was not ascertained for registration.

Metria.—The tables of the present Report exhibit 27 deaths as the result of this disease, which is more generally known under the name of puerperal or child-bed fever, being a decrease of 20 from the number reported in 1855. During the fifteen years and eight months of registration, 305 deaths occurred within the Commonwealth, being about .14 per cent. of all the deaths from known causes in that period. During the year 1856, six of the 27 occurred in April; four each, in March and September; three in December: two each, in July, August and October; one each, in January, February, May and November: and in June there was no death from this cause.

Seventeen persons were between the ages of 20 and 30 years, three between 30 and 40, four over 40, and two between 15 and 20. Of one person who died of puerperal fever, the age was not obtained for registration. No deaths from this cause were returned from the counties of Barnstable, Franklin, Norfolk and Suffolk—the greatest number (eight) being from the county of Middlesex.

Three persons died of *Carbuncles*, and thirty-three from *Influenza*. Of those who died from the last mentioned cause, 17 were males and 16 females—the greatest number having died in the months of March, January and November. Ten died under five years of age, and the same number between the ages of seventy and eighty.

Dysentery.—The deaths by this cause are given in the following tables:—

DEATHS BY DYSENTERY.

There were, in the year 1856, 930 fatal cases of dysentery—483 among males, 442 among females, and of 5 the sex was not ascertained for registration.

A very large proportion of the mortality by this cause occurred to children under the age of five years, viz.: 633 deaths, making over 63 per cent. of the whole number. One hundred persons died between the ages of 20 and 50 years.

The most fatal months were September, August, October and July, when 290, 255, 164 and 120 deaths were reported severally. There were only 30 in November, 17 in May, 13 in January and June, 12 each, in April and December, 9 in February and 6 in March.

No portion of the Commonwealth has been entirely free from the effects of this disease, the counties remote from the sea suffering in a much greater degree than those on the coast.

According to the returns, 262 persons died during the year 1856 of *Diarrhœa*, being 53 less than in the previous twelve months, comprising 1.23 per cent. of all the deaths in the Commonwealth from known causes. Of these, 118 were reported as males, 143 as females, and 1 of unknown sex. Although the mortality was extended to every period of life, the greatest proportion of deaths occurred during the period preceeding the fifth year.

The most fatal time of the year was August, September, July and October. In the first named of these months there were 63 deaths. In the cooler part of the year the mortality was quite small. The distribution was very even throughout the Commonwealth.

Cholera.—Under this term are included all that sub-class of diseases generally known as Spasmodic Cholera, and Cholera Morbus or Bilious Cholera; and the reports from the several towns show a considerable diminution of deaths from the returns of the previous year. To this cause only 55 deaths have been attributed, being 15 less than in 1855, and 710 less than in 1854, when undoubtedly other causes were confounded with this. These few deaths occurred in the warmest months and to persons in every period of life.

Cholera Infantum.—As one of the most frequent causes of death among young children, this disease is of considerable interest to medical practitioners, and therefore the following tables have been prepared:—

DEATHS BY CHOLERA INFANTUM.

<i>Deaths during Eight Years, 1849-56, showing the Number of Deaths in each County during the first four, and also during each of the last four years, together with the Aggregate, Percentage, and Ratio to the Census of 1855.</i>

																		-	

Since the preceding year there has been a decrease of 191 in the number of deaths by Cholera Infantum. Of the 555 deaths, 297 were of males, 254 of females, and 4 were of persons of unknown sex. By far the greatest mortality was during the months of August, September, July and October, agreeing with the tables constructed to show the results of eight years. In the other eight months the number (43) was very small.

All excepting ten died under five years of age, and six of the remaining ten between the ages of five and ten years. Through carelessness or ignorance there were reported to have died of this disease one person between 10 and 15 years of age, two between 20 and 30 years of age, and one between 50 and 60, as will be seen by the table on page 251.

Intermittent and Remittent Fevers.—Ten persons died of *ague*, or intermittent fever, 6 males and 4 females. All but one of whom were adults, and this was an infant under five years of age. Twelve persons died of remittent fever, 9 males and 3 females, in nearly every month of the year, and in the middle periods of life.

Rheumatism.—Fifty-seven persons were returned as having died of this cause in 1856—37 males and 20 females.

No deaths were registered to the account of *miliaria*, *mumps*, *pyemia*, *hospital gangrene*, or *yellow fever*.

In the second order of Zymotic diseases, called *Enthetic*, there were 13 deaths, none of which were chargeable to *Hydrophobia*.

In the third order of the same class, called *Dietic*, 11 died of *Purpura* and *Scurvy*, and 96 of *Intemperance*.

Fifty persons died of causes embraced in the fourth order, *Parasitic*.

CONSTITUTIONAL CAUSES.—This class includes the sporadic diseases, and is divided into two orders, the *Diathetic* and *Tubercular*. Although they oftentimes appear as being of a very local character, nevertheless they seldom produce death before affecting various parts of the system.

Of the diseases of the first order, *Diathetic*, there died during the year 2 of *gout*, 530 of *dropsy* and *anæmia*, 217 of *cancer*, 176 of *noma*, (canker,) and 44 of *mortification*, making, in all, 969.

The second order, *Tubercular*, is more numerous. The following tables exhibit the results of *scrophula* during the year:—

DEATHS BY SCROFULA.

There died of scrofula 98 persons during the year, 53 males and 45 females, and these occurred very nearly proportioned among the different months of the year, and in the various counties of the Commonwealth, with the exception of Dukes and Nantucket, in which no death from this cause has been reported during the last eight years.

Forty-four children died under five years of age, and in each of the other periods adopted for the tables, there were a proper proportion according to the persons living. In eight years the number of deaths throughout the State amounted to 757—399 males, 353 females, and 5 of unreported sex.

There died of *Tubercles Mesenterica*, according to the abstracts, 205 persons, 100 males and 105 females, 177 of whom were children under five years of age. The remainder were of persons some of whom belonged to each of the various periods of life. The distribution was very equal as regards the time of death, some persons having died in each month. But in point of place, the greatest fatality was in the counties of Suffolk, Plymouth, Middlesex and Worcester.

Phthisis.—The most destructive of all the causes of death in the Commonwealth is Consumption, and to this alone have been attributed 4,701 deaths, being 22.66 per cent. of all returned for registration during the year 1856, and showing a diminution in number of 49 from the Report of the previous year. Of these, 1,943 were returned as of males, 2,754 as of females, and 4 as of persons whose sex was not reported.

The mortality, throughout the year, was much more regular than heretofore, scarcely any difference in number existing as respects the different months.

There were returned 418 deaths as having occurred to children under five years of age. These may and probably should have been set down to the account of Cholera Infantum or the other infantile complaints. After passing the period of youth, 532 others having died under 20 years of age, a large mortality took place to persons between the ages of 20 and 30 years of age, amounting to 1,250—458 men and 792 women. The tables which follow are interesting as furnishing results for a period of several years:—

DEATHS BY CONSUMPTION.

The counties of Suffolk, Middlesex, Essex and Worcester show much the largest mortality, as usual.

Hydrocephalus.—During the year 1856 there were fewer deaths by this cause than during the previous year, numbering in all 392, a decrease of 84 from the number reported in 1855. Of these 215 were of males, and 177 of females. Nearly all (346) died in early age, under five years: 28 were between the ages of five and ten years, and the remainder (18) were distributed among the different periods of life, even to the very advanced period of nearly 80 years. Much the greatest number (155) died in the county of Suffolk.

LOCAL DISEASES.—In the Appendix this class of diseases is described as of a sporadic character, the functions of particular organs or systems being disturbed or obliterated, with or without inflammation, and not necessarily hereditary. The eight orders into which the class is divided are: Diseases of the *nervous system*, of the *organs of circulation*, *respiration*, *digestion*, *urination*, *generation* and *locomotion*, and of the *integumentary system*.

The number of deaths from *diseases of the nervous system* during the year was 1,602, being a decrease of 77 when compared with the returns of the previous year, and comprising 7.72 per cent. of all the deaths during the year. The special causes of death were cephalitis, convulsions, paralysis, disease of brain, apoplexy, epilepsy, insanity, delirium tremens, and tetanus.

Of the 431 who died of *cephalitis*, 231 were males and 197 females; and of these 255 were under five years of age.

There were 353 persons who died of *convulsions*, 315 of whom died before attaining the age of five years.

Of those who died of *diseases of the organs of circulation*, 7 died of *pericarditis*, 3 of *aneurism*, and 575 of undefined diseases of the heart.

The number of those who died of *diseases of the respiratory organs* was 1,206, much the largest portion of deaths occurring from *pneumonia*.

There were attributed to this last named cause 978 deaths, being 58 more than occurred during the preceding year. Of these 511 were of males, 463 of females, and 4 of persons of unknown sex.

The following tables were constructed to exhibit the mortality from this cause during the eight years, 1849—56.

DEATHS BY PNEUMONIA.

Deaths during Eight Years, 1849-56, showing the number of Deaths in each County during the first four, and also during each of the last four years, together with the Aggregate, Percentage, and Ratio to the Census of 1855.

It will be perceived that generally about 52 per cent. of all who die in Massachusetts of lung fever, are under five years of age at the time of decease; but during the year 1856 the percentage is somewhat less than 50 per cent. After passing the age of early youth the disease is most frequently fatal in advanced life.

In 1856 the month of March exhibits much the greatest mortality during the year, 136 persons having died in that month, according to the returns: and April, May, January, February and December the next greatest. In August, July and September, when a great number of deaths are occurring from most of the miasmatic diseases, very few fatal cases of this disease are recorded.

The tables show that by far the greatest proportional mortality occurs within the county of Suffolk, as with only a little over one seventh of the whole population of the Commonwealth there was actually reported about one-quarter of the whole number of deaths throughout the State from this cause.

One person died during the year of *laryngitis*, 23 of *bronchitis*, 133 of *pleurisy*, 36 of *asthma*, and 35 of other diseases of the lungs.

Among the diseases of the digestive organs, there has been an increase in the number of deaths by *enteritis*, *ileus*, *intussusception*, *ascites*, and *intestinal ulceration*; and a diminution in that of those by *peritonitis*, *hernia*, and *jaundice*.

The number of those who have died of urinary diseases has diminished from 133, reported in 1855, to 102 in 1856.

In the other orders of local diseases the mortality has been small, although in some greater than during the previous year.

DEVELOPMENTAL DISEASES.—The special diseases included in this class, are divided into four orders: The *developmental diseases of children*; the *developmental diseases of women*, chiefly in the reproductive age, the *developmental diseases of old people*, and the *diseases of nutrition*.

Included in the first order are the *stillborn*, which have been alluded to in a previous part of this Report.

Under the term *infantile*, there have been reported 1,324 deaths, a small reduction from the returns of last year; 706 of these were boys, 553 of girls, and 65 of persons of unknown sex.

The whole number of children reported as dying in consequence of the diseases accompanying teething, amounted to 385, 48 less than in 1855. The particulars are shown in the following tables:

Deaths by Teething during Eight Years, 1849-56, showing the number of Deaths in each Month, of both Sexes, during the first four years; also during each of the last four years, together with the Aggregate and Percentage.

Of the 385, who died during dentition, 213 were boys, 170 girls, and 2 of unknown sex. All except three of these died under five years of age. Undoubtedly many who died of other diseases consequent upon youth, were reported under this head, thereby accounting for the large number annually returned to the secretary's office.

The great mortality by this cause occurs chiefly in the months of September and August, and somewhat largely in October and July. In February, March and June, 1856, the number of deaths was very inconsiderable.

In the counties upon the seacoast, especially in the large cities where the children of foreigners chiefly reside, the number of deaths by this cause far exceeds that of the more inland towns. Only one child died in the counties of Dukes and Nantucket, 3 each in Berkshire and Essex, 4 each in Hampshire and Plymouth, 9 in Hampden, 10 in Barnstable, 31 in Bristol, 37 in Worcester, 39 in Essex, 40 in Norfolk, 56 in Middlesex, and 148 in Suffolk.

Four of the deaths in this order were attributed to *cyanosis*, 3 to *spina-bifida*, and 4 to *malformations*.

In the second order, comprising the diseases of women, 5 died of *paramenia*, and 170 of *child-birth*. From this last cause there died in 1851, 117 persons; in 1852, 160 persons; in 1853, 199 persons; in 1854, 184 persons; and in 1855, 164 persons.

The third order, including those who died of old age, exhibits 978 deaths. Of these, 151 were returned from the county of Middlesex; 149 from Worcester; 128 from Essex; 101 from Norfolk; 90 from Plymouth; 71 from Bristol; 62 from Suffolk; 56 from Hampden; 42 from Hampshire; 38 each from Barnstable and Berkshire; 33 from Franklin; and 19 from Dukes and Nantucket. Of these, 392 were of old men, 585 of old women, and 1 a person of unknown sex; and 105 died in the month of January, 101 in December, 91 in March, 87 in November, 83 each in May and August, 81 in February, 72 in September, 68 in October, 62 in July, 59 in June, and of 4 the month was not stated in the returns.

VIOLENT DEATHS OR DISEASES.—In this class, 429 persons died by *accidents*, 20 by *homicide*, 101 by *suicide*, and 291 by other violent causes not distinguished in the returns.

The tables which follow show the particulars of the 101 who died by suicide:—

DEATHS BY SUICIDE.

In 1856, the greatest number of suicides were committed by individuals in the period comprising persons between the ages of twenty and thirty years, and the next greatest in that between fifty and sixty years. Seventy-one males and thirty females were reported as having committed this act in the several towns throughout the Commonwealth. The greatest numbers were in the counties of Middlesex, Worcester and Suffolk, and in the months of March, October and November. Of the eighteen who committed suicide in Boston during the year 1856, ten were native born, and eight were foreigners. The deaths were caused by the following means:—

	Males.	Females.
By Laudanum,	3	3
Drowning,	2	—
Hanging,	5	1
Shooting,	1	—
Arsenic,	1	1
Jumping from Window,	1	—

It will be noticed that the number of deaths by suicide has constantly been on the increase throughout the Commonwealth during the past eight years. In 1849, 67 cases were reported—48 males, 18 females, and one of unknown sex; in 1850, 49 cases—38 males and 11 females; in 1851, 57 cases—38 males and 19 females; in 1852, 76 cases—49 males, 26 females, and 1 of unknown sex; in 1853, 67 cases—47 males, and 20 females; in 1854, 82 cases—59 males and 23 females; in 1855, 91 cases—69 males and 22 females; and in 1856, 101 cases—71 males and 30 females.

In an aggregate of 590 cases in eight years, more than one-sixth occurred during the year 1856, and of these 419, or 71.02 per cent. of males; 169, or 28.64 per cent. were females, and of 2 the sex was not ascertained. During the four decadal periods of 20 to 30, 30 to 40, 40 to 50, and 50 to 60, the number of deaths was very nearly the same, viz.: 111, 108, 112, and 109. This is somewhat remarkable when it is seen that in all the other periods combined there were but 150 cases, and of these the ages of 15 persons were not reported.

Taking the eight years together the greatest number of suicides was committed during the months of May, and in the counties of Worcester and Middlesex.

The following table contains 4,036, or 94.89 per cent. of the deaths in the city of Boston, and gives the birthplaces and parentage of the deceased. It will be noticed, that of the number of deaths recorded, foreigners and their children make 65.51 per cent., or stand towards those of American birth in the ratio of nearly two to one.

Causes of Death.	Foreign Parentage.				Causes of Death.	Foreign Parentage.			
	Number.	Native.	Foreign.	Foreign Parentage.		Number.	Native.	Foreign.	Foreign Parentage.
Accidents, . . .	181	54	84	43	Heart, diseases of, . . .	115	63	41	3

Some of the accidental causes of death in Boston were—

By drowning,	59
railroad accidents,	9
sunstroke,	14
discharge of cannon,	1
being run over by vehicles,	6
fracture of skull,	5
abortion,	2
chloroform,	1
nitric acid,	2
burning,	29
scalding,	13
suffocation,	7
poison,	2

During the year 1856 there was no execution within the Commonwealth.

It has been the object of the preceding remarks on the causes of death, to give an analysis of the principal diseases only, leaving the tables which comprise the abstract to exhibit the necessary facts in regard to those of less interest and importance.

OCCUPATIONS OF SUCH AS HAVE DECEASED.

A portion of several of the last Reports has usually been devoted to the consideration of the occupations of those who have died during the year, a subject which has excited much interest in the community; and for this special purpose the table on pages 114—120 has been prepared. Included in this table are all who died during the year, over twenty years of age, whose individual occupations were reported for registration.

It has been customary to divide the State into two parts for the purpose of classification, one part comprising the nine eastern counties—Barnstable, Bristol, Dukes, Essex, Middlesex, Nantucket, Norfolk, Plymouth and Suffolk; the other including the five western counties—Berkshire, Franklin, Hampden, Hampshire and Worcester.

The different vocations have usually been arranged in eight classes.

In the eastern counties these classes, according to the returns, show that there died of persons whose occupations were known, 3,161 individuals, whose ages in aggregate amounted to 153,806 years, giving an average age of 48.65 to each. Arranged according to longevity, the classes stand thus: 503 agriculturists, average age 65.30 years; 80 professional men, 51.40 years; 129 paupers, 48.24 years; 196 public men, 45.75 years; 705 laborers, 45.54 years; 1,064 mechanics, 45.30 years; 221 seamen, 44.75 years; and 263 merchants, 43.45 years.

Of the 1,141 persons who died in the western counties, in the aggregate the ages amounted to 62,391, or 54.68 years to each individual. They are thus classed according to longevity: 477 agriculturists, 65.29 years; 21 paupers, 54.95 years; 314 mechanics, 47.70 years; 41 professional men, 47.63 years; 198 laborers, 46.37 years; 35 public men, 46.23 years; 52 merchants, 43.80 years; 3 seamen, 27.66 years.

This classification cannot always be relied upon implicitly, because very often persons after attaining an advanced age

relinquish mechanical and mercantile callings, and are variously designated at the time of decease, and perhaps at variance with the truth. For instance, it is very common for retired merchants and mechanics, who have acquired a competency in early life, to be styled gentlemen; and oftentimes persons of the same vocations break down in life and become paupers. On the other hand, agriculturists and professional men generally retain their designation to the last, although they may have relinquished their calling for many years.

The following columns contain some of the most common occupations, arranged alphabetically for the whole Commonwealth, of those who have died during the twelve years and eight months ending on the thirty-first of December, 1855, together with the average age attained by the deceased in each vocation:—

Agriculturists,	64.19	Masons,	47.42
Artists,	39.17	Mechanics,	43.13
Bank Officers,	56.35	Merchants,	52.19
Blacksmiths,	51.83	Millers,	62.22
Butchers,	50.29	Musicians,	40.59
Cabinet-makers,	47.08	Operatives,	34.25
Carpenters,	49.65	Painters,	42.18
Clergymen,	57.01	Paupers,	57.27
Clerks,	33.61	Physicians,	54.85
Coopers,	58.32	Printers,	36.60
Gentlemen,	63.90	Rope-makers,	55.80
Glass Blowers,	39.73	Seamen,	46.21
Hatters,	55.43	Shipwrights,	56.20
Judges and Justices,	71.54	Shoemakers,	43.22
Jewellers,	42.96	Stonecutters,	43.91
Laborers,	41.71	Tailors,	42.35
Lawyers,	57.15	Tanners and Curriers,	48.05
Machinists,	37.55	Traders,	46.54
Manufacturers,	44.40	Weavers,	46.84

Of the 38,027 persons who died within the twelve years and eight months whose ages and occupations were given, the combined ages amounted to 1,949,635 years, or 51.27 years to each individual.

The females whose ages and employments were reported for the twelve years and eight months ending December 31, 1855, exhibit the following results as respects longevity:—

Domestics,	44.73	Sempstresses,	42.43
Dress-makers,	32.32	Shoebinders,	45.59
Housekeepers,	50.59	Straw-braiders,	32.81
Milliners,	35.07	Straw-sewers,	39.54
Nurses,	54.58	Tailoresses,	41.05
Operatives,	27.74	Teachers,	28.50

These 2,626 females give an aggregate age of 120,396 years, or an average of 45.84 years to each person.

The City Registrar of Boston furnishes the following table, showing the aggregate and average ages of 891 persons who died in Boston in 1856, whose professions and occupations were ascertained:—

No.	Occupations.	Ages Range from	Aggregate Ages.	Average Ages.
308	Laborers,	16 to 85	12,648	41.06
51	Traders,	21 to 77	2,298	45.05
50	Mariners,	18 to 75	1,974	39.48
29	Merchants,	21 to 90	1,539	53.06
29	Clerks,	16 to 56	808	27.86
25	Tailors,	21 to 65	900	36.00
25	Carpenters,	19 to 81	1,165	41.20
22	Shoemakers,	17 to 75	804	36.54
17	Printers,	16 to 60	585	34.41
14	Teamsters,	24 to 53	539	38.50
14	Painters,	20 to 66	527	37.64
13	Blacksmiths,	22 to 58	457	35.15
20	Gentlemen,	23 to 60	1,222	61.10
11	Machinists,	16 to 54	381	34.63
10	Farmers,	40 to 79	587	58.70
9	Coopers,	22 to 62	459	51.00
9	Stonecutters,	21 to 56	365	40.55
8	Ship Carpenters,	27 to 69	311	39.25
7	Bakers,	25 to 53	276	39.42
7	Musicians,	22 to 62	257	36.71
6	Clergymen,	49 to 78	341	56.83
5	Cabinet-makers,	16 to 26	105	21.00
5	Coppersmiths,	18 to 38	139	26.00
5	Physicians,	53 to 78	358	71.60
8	Masons,	21 to 80	379	47.37
4	Lawyers, etc.,	32 to 68	178	44.50
180	Various Occupations,	16 to 82	6,899	38.82
891	Totals,		36,135	40.55

The facts in this connection are of a highly interesting character, having been collected for registration for many years, and much care having been taken in constructing the tables of the previous reports.

A P P E N D I X .

CLASSIFICATION AND NOMENCLATURE OF DISEASES.

The following classification of the causes of death adopted in the Fourteenth Registration Report has been used in the preparation of the tables of the present Report, in order that the Massachusetts Reports may conform, as nearly as possible, to those of other countries. The statistical nosology is that recommended by William Farr, Esq., M. D., of England, and which has been adopted in Great Britain, and will be used almost entirely on the European continent.

C L A S S E S .

I.—ZYMOTIC DISEASES :—*Zymotici*. (*ζύμη*, leaven.)

Diseases that are either epidemic, endemic, or contagious; induced by some specific body, by the want of proper nourishment, or by the bad quality of food.

II.—CONSTITUTIONAL DISEASES :—*Cachectici*. (*καχεξία*, bad habit of body.)

Sporadic diseases; affecting several organs in which new morbid products are often deposited; sometimes hereditary.

III.—LOCAL DISEASES :—*Monorganici*. (*μόνος*, alone, without others; *ὄργανον*, organ.)

Sporadic diseases in which the functions of particular organs or systems are disturbed or obliterated, with or without *inflammation*; sometimes hereditary.

IV.—DEVELOPMENTAL DISEASES :—*Metamorphici*. (*μεταμόρφωσις*, change of form.)

Special diseases, the incidental result of the formative, reproductive, and nutritive processes.

V.—VIOLENT DISEASES OR DEATHS :—*Thanatici*. (*θάνατος*, violent deaths.)

Diseases which are the evident and direct results of physical or chemical forces, acting either by the will of the sufferer, of other persons, or accidentally.

O R D E R S .

- Class I.—Order 1. Miasmatic diseases :—Miasmatici. (*αἰσμία*, stain ; defilement.)
2. Enthetic diseases :—Enthetici. (*ἐρθεῖος*, put in ; implanted.)
3. Dietic diseases :—Dietici. (*δῆτα*, way of life ; diet.)
4. Parasitic diseases :—Parasitici. (*παράσιτος*, parasite.)
- Class II.—Order 1. Diathetic diseases :—Diathetici. (*διάθεσις*, condition ; diathesis.)
2. Tubercular diseases :—Phthisici. (*φθίσις*, wasting away.)
- Class III.—Order 1. Brain diseases :—Cephalici. (*κεφαλή*, head.)
2. Heart diseases :—Cardiaci. (*καρδία*, heart.)
3. Lung diseases :—Pneumonic. (*πνεύμων*, lung.)
4. Bowel diseases :—Enterici. (*ἐντέρον*, intestine.)
5. Kidney diseases :—Nephritici. (*νεφρός*, kidney.)
6. Genetic diseases :—Aidoici. (*αἰδοῖα*, pudenda.)
7. Bone and Muscle diseases :—Myostici. (*μῦς*, muscle ; *ὀστέον*, bone.)
8. Skin diseases :—Chrotici. (*χρῶς*, skin.)
- Class IV.—Order 1. Developmental diseases of children :—Paiidiaci. (*παιδία*, youth.)
2. Developmental diseases of women :—Gyniaci. (*γυνή*, woman.)
3. Developmental diseases of old people :—Geratici. (*γῆρας*, old age.)
4. Diseases of nutrition :—Atrophici. (*ἀτροφία*, atrophy.)
- Class V.—Order 1. Accident :—Tychici. (*τύχη*, chance.)
2. Battle :—Polemici. (*πόλεμος*, battle ; fight.)
3. Homicide :—Androphonici. (*ἀνδρῖς*, man ; *φονεῖω*, I kill.)
4. Suicide :—Antophonici. (*αὐτὸς*, self ; *φονεῖω*, I kill.)
5. Execution :—Demiotici. (*δημώτης*, executioner.)

[* * The names of such of the following diseases as are printed in small capitals, are sufficient for statistical tables of the Causes of Death.]

CLASS I. ZYMOTIC DISEASES.—*Zymotici*.

ORDER I.—*Miasmatici*.

SMALLPOX, *variola*.
 Varioloid, *varioloïdes*.
 Chicken-pox, *varicella*.
 Miliaria.
 MEASLES, *morbilli*.
 SCARLATINA.
 (a.) Angina maligna, classed with scarlatina.
 QUINSY, *tonsillia, tonsillitis*.
 Diphtheria.
 Mumps, *parotia, parotitis*.
 CROUP, *trachealia, epuanche trachealis*.
 WHOOPING COUGH, *pertussis*.
 Typhoid fever, *febris typhoides*.
 Relapsing fever, *febris recurrens*.
 TYPHUS.
 ERYSIPELAS.
 Erythema.
 Pyemia.
 Hospital Gangrene, *gangrana nosocomialis*.
 METRIA, *febris puerperarum*.
 Pestis, plague, *pestis*.
 CARBUNCLE, *anthrax*.
 Boil, *furunculus*.
 INFLUENZA.
 Including the epidemic pleurisy and pneumonia.
 DYSENTERY, *dysenteria*.
 DIARRHŒA.
 CHOLERA.
 Yellow fever, *typhus icterodes*.
 AGUE, *febris intermittens*.
 REMITTENT FEVER, *febris remittens*.
 (Hong Kong and other fevers, *febris tropicorum*.)
 RHEUMATISM, *rheumatismus acutus*.

ORDER II.—*Enthetici*.

SYPHILIS, primary, *sypphilis primarius*.
 Syphilis, secondary, *sypphilis secundarius*.
 Gonorrhœa.
 Leprosy, *lepra*.
 (Including Greek elephantiasis.)
 Purulent ophthalmia, *ophthalmia purulenta*.
 Glanders, *equinia*.
 HYDROPHOBIA, *rabies*.
 Necusis.
 (Infection by puncture in dissection.)
 Malignant pustule, *pustula maligna*.

ORDER III.—*Dietici*.

Famine fever, *febris à jeûne*.
 Scurvy, *scorbutus*.
 PURPURA.
 Rickets, *rachitis*.
 Bronchocele.
 Cretinism, *cretinismus*.
 Ergotism, *ergotismus*.
 Alcoholism, *alcoholismus*.
 (Includes intemperance, delirium tremens, and catacausis.)

ORDER IV.—*Parasitici*.

THRUSH, *aphtha*.
 Porrigo.
 Scabies.
 Phthiriasis, *morbus pedicularis*.
 WORMS, *vermes*.
 (a.) Hydatids, *acccephalocystis, echinococcus hominis*.
 (b.) Tape Worm, *tenia solium*.
 (c.) Strongilus Gigas.
 (d.) Round worm, *ascaris lumbricoides*.
 (e.) Thread worm, *ascaris vermicularis*.
 (f.) Guinea worm, *dracunculus*.

CLASS II. CONSTITUTIONAL DISEASES.—*Cachectici.*ORDER I.—*Diathetici.*

GOUT, *podagra*.
 Anæmia.
 DROPSY, *hydrops*.
 CANCER, (soft,) *carcinoma encephaloïdes*.
 Cancer (colloid,) *carcinoma alveolare*.
 Cancer (osteoid,) *carcinoma osteoides*.
 Cancer, (schirrhous,) *scirrhus*.
 Cancer, (epithelial,) *carcinoma epitheliale*.
 (Sweep's cancer, &c.)
 Melanosis.
 Lupus.
 CANKER, *noma*.
 MORTIFICATION, *gangrena*.

Dry gangrene, *gangrena sculis*.
 Bed sore.

(Refer hæmorrhage, abscess, ulcer, tumor, to the organs affected.)

ORDER II.—*Phthisici.*

SCROFULA.

(a.) Psoas abscess, *abscessus psoanus*.)

White swelling.

TUBERCULOSIS MESENTERICA.

Tubercular peritonitis.

PHTHISIS.

(Hæmoptysis.)

HYDROCEPHALUS.

(With tubercular deposit.)

CLASS III. LOCAL DISEASES.—*Monorganici.*ORDER I.—*Cephalici.*

Meningitis.
 Encephalitis.
 (Including acute hydrocephalus.)
 CEPHALITIS.
 Myelitis.
 APOPLEXY, *apoplexia*.
 PARALYSIS of —.
 Shaking palsy, *paralysis agitans*.
 CHOREA.
 DELIRIUM TREMENS.
 MANIA.
 Monomania.
 Dementia.
 EPILEPSY, *epilepsia*.
 Hysteria.
 TETANUS.
 CONVULSIONS, *convulsio, eclampsia*.
 Laryngismus.
 Neuralgia.
 (Tic douloureux.)
 Neuroma.
 Ophthalmitis.
 Blindness, *cæcitas*.
 Otitis.
 Deafness, *surditas*.

ORDER II.—*Cardiaci.*

Carditis.
 PERICARDITIS.
 Endocarditis.
 DISEASE OF HEART VALVES, *morbus cordis valvularum*.
 Heart hypertrophy, *hypertrophia cordis*.
 Heart atrophy, *atrophia cordis*.
 Heart, fatty degeneration, *cordis degeneratio*.
 ANEURISM OF THE HEART, *aneurisma cordis*.
 Aneurism of the aorta, popliteal artery, &c., *aneurisma aortæ, &c.*
 Angina pectoris.
 Fainting, *syncope*.
 Arteritis.
 Atheroma of arteries, *atheroma arteriarum*.
 Phlebitis.
 Varicose veins, *varix*.

ORDER III.—*Pneumonici.*

Epistaxis.
 LARYNGITIS.
 (Œdema of the glottis, *œdema glottidis*.)

Laryngismus stridulus.
 BRONCHITIS.
 PLEURISY, *pleuritis*.
 Hydrothorax.
 Empyema.
 Pneumothorax.
 Congestion of lungs, *apoplexia pulmonalis*.
 PNEUMONIA.
 Pleuripneumonitis.
 ASTHMA.
 (Emphysema of lungs, *emphysema*.)
 Grinder's asthma, *asthma tritorum*.
 Miner's asthma, *asthma metallicorum*.
 Spurious Melanosis, *asthma metallicorum*.

ORDER IV.—*Enterici*.

Glossitis.
 Stomatitis.
 Pharyngitis.
 Oesophagitis.
 GASTRITIS.
 ENTERITIS.
 PERITONITIS.
 ILEUS.
 Constipation, *constipatio*.
 INTUSSUSCEPTION, *intussusceptio*.
 HERNIA.
 Hernia, (congenital,) *congenitalis*.
 Hernia, (femoral,) *femoralis*.
 Hernia, (inguinal,) *inguinalis*.
 Hernia, (scrotal,) *scrotalis*.
 Hernia, (umbilical,) *umbilicalis*.
 Hernia, (ventral,) *ventralis*.
 STRICTURE OF ILIUM, &c., *contractura ili, &c.*
 Perforation of ilium, &c., *perforatio ili, &c.*
 Dyspepsia.
 Pyrosis.
 Gastralgia.
 Hæmatemesis.
 Melæna.
 Hæmorrhoids, *hæmorrhoids*.
 FISTULA.
 PANCREATIC DISEASE, *morbus pancreaticus*.

SPLENITIS.
 HEPATITIS.
 JAUNDICE, *icterus*.
 Gallstones, *chololithus*.
 Cirrhosis.
 ASCITES.

ORDER V.—*Nephritici*.

NEPHRITIS.
 ISCHURIA.
 Diuresis.
 NEPHRIA.
 (Bright's disease, *Albuminuria*.)
 DIABETES.
 STONE, *calculus*.
 (Uric acid, &c.)
 Gravel, *calculus*.
 Hæmaturia.
 CYSTITIS.
 Disease of the prostate gland, *morbus prostaticus*.
 CONTRACTURA URETHRÆ.

ORDER VI.—*Genetici*.

Varicocele.
 Orchitis.
 Hydrocele.
 Hysteritis.
 OVARIAN DROPSY, *hydrops ovarii*.
 Ovarian tumor, *tumor ovarii*.
 Uterine tumor, *tumor uteri*.
 Polypus of uterus, *polypus uteri*.

ORDER VII.—*Myostici*.

SYNOVITIS.
 Ostitis, (including periostitis and endostitis.)
 Exostosis.
 Brittle bones, *fragilitas ossium*.
 Soft bones, *mollities ossium*.
 Curvature of spine, *curvatura spinæ*.
 Caries.
 Necrosis.
 Muscular atrophy, *atrophia musculorum*.

ORDER VIII.—*Chrotici*.

Roseola.
 Urticaria

Eczema.
Herpes.
Pemphigus.
Rupia.
Ecthyma.
Impetigo.
Acne.
Mentagra.

Lichen.
Prurigo.
Psoriasis.
Pityriasis.
Ichthyosis.
PHLEGMON.
Whitlow, *paronychia*.
Abscess, (external.) *abscessus externus*.

CLASS IV. DEVELOPMENTAL DISEASES.—*Metamorphici*.

ORDER I.—*Developmental Diseases of Children:—Padiaci.*

Stillborn, *natus mortuus*.
PREMATURE BIRTH, *prematurè natus*.
Atelectasis, *atelectasis pulmonum*.
Malformations, *vitia conformationis*.
Cyanosis.
Spina bifida.
Anus imperforatus.
Idiocy, *fatuitas*.
Congenital deaf-dumbness, *mutitas*.
Teething, *dentitio*.

ORDER II.—*Developmental diseases of Women, chiefly in the Reproductive Age:—Gyniaci.*

Chlorosis.
CHILD BIRTH, miscarriage, abortion, *partus, abortus*.
Paramenia, including amenorrhœa, and leucorrhœa.
Climacteria. (Turn of life.)

ORDER III.—*Developmental Diseases of Old People:—Geratici.*

Old Age, *senectus*.

ORDER IV.—*Diseases of Nutrition:—Atrophici.*

Atrophy, debility, including premature old age, *atrophia, asthenia*.

CLASS V. VIOLENT DEATHS OR DISEASES.—*Thanatici*.

ORDER I.—*Accident:—Tychici.*

Burn, scald, *ambustio*.
Explosion of powder, gas, &c., *explosio*.
Frost, *gelatio*.
Lightning, *fulmen*.
Sunstroke, *insolatio*.
Drowning, *submersio*.
Hanging, *suspensum*.
Suffocation, *suffocatio*.
Fracture of —, *fractura* —.
Contusion of —, *contusio* —.
Concussion of —, *commotio* —.
Gunshot wound, *vulnus a tormento*.
Cut; stab, *vulnus cultro; sicâ*.
Poisoning, *veneratio*.
Privation, *privatio*.
Otherwise.

ORDER II.—*Battle:—Polemici.*

On the field, *in pugna terrestri*.
Gunshot wound, *vulnus a tormento*.
Cut; stab, *vulnus gladio; pugnione*.
Otherwise.
Naval engagement, *in pugna navali*.
After land fight, *post pugnam terrestrem*.
After sea fight, *post pugnam navalem*.
(Showing the nature of the wound.)

ORDER III.—*Homicide:—Androphonici.*

Burn, scald, *ambustio*.
Drowning, *submersio*.
Suffocation, *suffocatio*.
Fracture of —, *fractura* —.
Blow on —, *ictus* —.
Contusion of —, *contusio* —.

Concussion of —, *concussio* —.
 Gunshot wound, *vulnus a tormento*.
 Cut; stab, *vulnus cultro; sicā*.
 Poisoning, *venenatio*.
 Privation, *privatio*.
 Otherwise.
 (Duel, murder, &c., to be noted.)

ORDER IV.—*Suicide*:—*Autophonici*.

Burn, *ambustio*.
 Drowning, *submersio*.

Hanging, *suspendium*.
 Suffocation, *suffocatio*.
 Fracture, &c., *fractura, &c.*
 Gunshot wound, *vulnus a tormento*.
 Cut; stab, *vulnus cultro; sicā*.
 Poison by —, *venenatio*.
 Privation, *privatio*.

ORDER V.—*Execution*:—*Demiotici*.

Gunshot wound, *vulnus a tormento*.
 Hanging, *suspendium*.
 Otherwise.

The preceding list of diseases is sufficiently minute for all practical purposes, and should be followed as strictly as possible by those who collect statistical facts for registration. Perhaps in some cases more particularity might be necessary and could easily be given. In such instances it would be well for the persons who keep records to enter more at large the causes of death and any extraordinary circumstances attending them.

Under no circumstances should carbuncle, worms, dropsy, cancer, canker, mortification, convulsions, aneurism, hernia, malformation, exostosis, necrosis, abscess, &c., be set down as the causes of death without a much greater particularity. For instance, with the local causes there should be given the special part affected; and with the others there should be also given some positive characteristic by which the disease could be easily classed. No clerk or registrar should consider any cause of death recorded satisfactorily that he cannot easily and without doubt classify.

For the purpose of tabulation only a less formidable list of causes may be used, than that on the preceding pages; but this should not prevent the keeping of perfect records by the registering officers. An ample list of causes of death for statistical purposes will be found on pages 282 and 283.

STATISTICAL NOSOLOGY.

The following list exhibits the principal causes of death, classified and arranged in the order in which they have been considered proper for statistical purposes. It comprises causes which, in the preceding list, are distinguished by being printed in small capitals, and with which all others should, in the process of tabulation, be incorporated.

- I. ZYMOTIC.
- II. CONSTITUTIONAL.
- III. LOCAL.
- IV. DEVELOPMENTAL.
- V. VIOLENT.

- I.—1. MIASMATIC.

LAWS OF THE COMMONWEALTH IN RELATION TO THE
REGISTRATION OF BIRTHS, MARRIAGES, AND DEATHS.

REVISED STATUTES, *Chapter 15.*

SECT. 46. The town clerk shall keep a record of the births and deaths of all persons within his town, and coming to his knowledge; and he shall specify in such record the day of each birth and death, and the names of the parents of such persons, if known.

SECT. 47. Parents shall give notice to the clerk of their town of all the births and deaths of their children; and every householder shall give the like notice of every birth and death happening in his house; and the eldest person next of kin shall give such notice of the death of his kindred; and the keeper of any almshouse, workhouse, house of correction, prison or hospital, and the master or other commanding officer of any ship, shall give the like notice of every birth and death, happening among the persons under his charge; and every person, neglecting to give such notice for the space of six months after the birth or death shall have happened, shall forfeit to the use of the town a sum not exceeding five dollars.—*page 182.*

Chapter 75.

SECT. 17. Every justice and minister shall keep a record of all marriages solemnized before him, and in the month of April, annually, shall make a return, to the clerk of the town in which he resides, of a certificate, containing the Christian and surnames, and places of residence, of all the persons who have been by him joined in marriage within the year then last past, and also the time when, and the name of the town in which such marriages were respectively solemnized; and when neither of the married persons belongs to, or is resident in, the town in which the justice or minister resides, then such justice or minister shall, within thirty days after such marriage, also return a like certificate of the town in which one or both of the married persons may reside; and all marriages so certified to the clerk, shall be forthwith recorded by him in a book to be kept for that purpose.

SECT. 18. Every justice of the peace and minister, who shall neglect to make such returns, shall, upon conviction thereof, forfeit for each neglect a sum not less than twenty nor more than one hundred dollars; one moiety thereof to the use of the county in which he resides, and the other moiety to the use of the person who shall prosecute therefor.—*page 177.*

AN ACT

Relating to the Registry and Returns of Births, Marriages and Deaths.

SECT. 1. The clerks of the several cities and towns in this Commonwealth, annually, in the month of June, transmit to the Secretary of the Commonwealth, a certified copy of their record of births, marriages, and deaths, which have occurred within their respective cities and towns during the year next preceding the first day of said month.

The births shall be numbered and recorded in the order in which they are received by the clerk. The record of births shall state in separate columns the date of the birth, the place of birth, the name of the child, (if it have any,) the sex of the child, name and surname of one or both of the parents, occupation of the father, residence of the parents, and the time when the record was made.

The marriages shall be numbered and recorded in the order in which they are received by the clerk. The record of marriages shall state, in separate columns, the date of the marriage, the place of the marriage, the name, residence and official station of the person by whom married, the names and surnames of the parties, the residence of each, the age of each, the condition of each, (whether single or widowed,) the occupation, names of the parents, and the time when the record was made.

The deaths shall be numbered and recorded in the order in which they are received by the clerk. The record of deaths shall state in separate columns the date of the death, the name and surname of the deceased, the sex, condition, (whether single or married,) age, occupation, place of death, place of birth, names of the parents, disease or cause of death, and the time when the record was made.

SECT. 2. The school committee of each city or town shall, annually, in the month of May, ascertain, from actual inquiry or otherwise, all the births which have happened within such city or town during the year next preceding the first day of said May, together with the facts concerning births required by the first section of this act, and shall make an accurate return thereof to the clerk of such city or town, on or before the last day of said May; and the said school committee, or other person authorized by them to make such returns, shall be entitled to receive from the treasury of such city or town, five cents for each and every birth so returned.

SECT. 3. Every justice, minister, and clerk, or keeper of the records of the city wherein any marriages among the Friends or Quakers shall be solemnized, shall make a record of each marriage solemnized before him, together with all the facts relating to marriages required by the first section of this act; and each such justice, minister, clerk, or keeper, shall, between the first and tenth days of each month, return a copy of the record for the month next preceding, to the clerk of the city or town in which the marriage was solemnized; and every person, as aforesaid, who shall neglect to make the returns required by this section, shall be liable to the penalty provided in the eighteenth section of the seventy-fifth chapter of the Revised Statutes.

SECT. 4. Each sexton, or other person having the charge of any burial ground in this Commonwealth, shall, on or before the tenth day of each month,

make returns of all the facts required by the first section of the act, connected with the death of any person whose burial he may have superintended during the month next preceeding, to the clerk of the city or town in which such deceased person resided at the time of his death. And such sexton, or other person, shall be entitled to receive, from the treasury of the city or town to which the return is made, five cents for the return of each death made agreeably to the provisions of this act.

SECT. 5. The clerk of each city or town shall be entitled to receive from the treasury of such city or town, eight cents for the record of each birth and death: *provided*, such clerk shall comply with this act in all respects.

SECT. 6. It shall be the duty of the clerks of the several cities and towns, to make such distribution of blank forms of returns as shall be designated by the Secretary of the Commonwealth.

SECT. 7. The Secretary of the Commonwealth shall prepare and furnish to the clerks of the several cities and towns in this Commonwealth, blank books of suitable quality and size, to be used as books of record, according to the provisions of this act, and also blank forms of returns, as herein-before specified, and shall accompany the same with such instructions and explanations as may be necessary and useful; and he shall receive said returns, and prepare therefrom such tabular results as will render them of practical utility; and shall make report thereof annually to the legislature, and generally shall do whatever may be required to carry into effect the provisions of this act.

SECT. 8. Any clerk who shall neglect to comply with the requirements of this act, shall be liable to a penalty of ten dollars, to be recovered for the use of any city or town where such neglect shall be proved to have existed.

SECT. 9. An act entitled "An Act relating to the registry of births, marriages, and deaths," passed on the third day of March, in the year one thousand eight hundred and forty-two, is hereby repealed.

SECT. 10. This act shall take effect from and after its passage. [*Approved, March 16, 1844.*]

AN ACT

Relating to the Registration of Births, Marriages, and Deaths.

SECT. 1. Town and city clerks are hereby authorized and required to obtain record, and index, the information concerning births, marriages, and deaths, now required by law. Towns and cities, containing more than ten thousand inhabitants, may choose a person, other than the town or city clerk, to be town or city registrar, to perform this duty instead of the town or city clerk; and said registrar shall take an oath faithfully to perform the duties of the office.

SECT. 2. The fees of the clerk and registrar, for obtaining, recording and indexing the information required by this act, shall be as follows:—For each birth, twenty cents; for each intention of marriage, including the certificate to the parties, fifty cents; for each marriage solemnized, ten cents; for each death, five cents; and the undertaker shall be allowed ten cents for information con-

APPENDIX.

cerning each death which he returns to the clerk or registrar; said fees for births, deaths, and marriages solemnized, shall be paid by the town; and for intentions of marriage, by the parties having such intentions: *provided, however*, that the aggregate compensation, allowed to any clerk or registrar, may be limited by any town or city containing over ten thousand inhabitants, but, in no case, so as to prevent the full execution of this act.

SECT. 3. Any undertaker, or other person, having the superintendence of the burial of any deceased person, who shall neglect or refuse to obtain and return the information required by this act, concerning each person deceased, whose burial shall come under his superintendence, shall be liable to a penalty not exceeding twenty dollars for each neglect, and, if an undertaker, to be deprived of his office. And every clerk or registrar, who wilfully neglects or refuses to perform the duties herein prescribed, shall be liable to a penalty of not less than twenty, nor more than one hundred dollars, for each neglect or refusal. All penalties and forfeitures, under this act, may be recovered by any person who shall sue for the same, one-half thereof to the use of the said complainant, and the other half to the use of the town or city in which the forfeiture shall have been incurred.

SECT. 4. The returns required to be made on the first day of February, in the year one thousand eight hundred and fifty, shall include the births, deaths, and marriages, from the first day of May, in the year one thousand eight hundred and forty-eight, to said day of return.

SECT. 5. Copies of records, in the several towns and cities, of the births, marriages, and deaths, which occurred during the next preceding year, ending December thirty-first, shall be returned to the Secretary of State, annually, on or before the first day of February. The blank forms of said returns shall be printed on paper of uniform size; and those for each year, when filled out and returned to the office of the Secretary of State, shall be bound together, in one or more volumes, and shall be furnished with an index. Blank books for indexes to the town registrars, shall be prepared by the Secretary of State, and furnished to the several towns and cities at the expense of the Commonwealth.

SECT. 6. All parts of acts inconsistent with the provisions of this act, are hereby repealed. [*Approved, May 2, 1849.*]
